

<<杀菌、消毒和控制>>

图书基本信息

书名：<<杀菌、消毒和控制>>

13位ISBN编号：9780443054358

10位ISBN编号：0443054355

出版时间：1998-8

出版时间：Oversea Publishing House

作者：Gardner, Joan Forrest; Peel, Margaret M.

页数：267

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<杀菌、消毒和控制>>

内容概要

This key resource aims to provide a concise but clear and comprehensive account of the principles and current practices of sterilization, disinfection and infection control. Sterilization: Included in the third edition are the low temperature sterilization technologies based on gas plasma but also incorporating contributions from vapour phase hydrogen peroxide and peracetic acid. Decontamination by vapour phase hydrogen peroxide, as used in the pharmaceutical and biotechnology industries, is described, as is the application of a self-contained liquid peracetic acid system to the decontamination of flexible endoscopes. Disinfection: Results of recent investigations into the heat resistance of bacterial spores are discussed, along with recognition of the inadequacy of some currently recommended inactivation procedures for the extraordinarily resistant prions. The prevalence of biofilm formation and its importance in protecting entrained microorganisms from the action of chemical disinfectants is also presented. Infection Control: The infection control content has been both updated and upgraded. Standard Precautions have displaced Universal Precautions and include recommendations for the control of emerging antibiotic resistant bacteria and bacterial infections such as vancomycin resistant enterococci and nosocomial tuberculosis. References are made throughout the text to recent revisions of many National Standards. International Standards now apply to sterilization by radiation and ethylene oxide and to the classification of airborne particles in cleanrooms. This authoritative work provides a resource for those involved in, or responsible for, the provision of sterile supplies or services and the application of the principles and practices of infection and contamination control. It also meets the requirements of tertiary education for health care professionals and students of applied microbiology.

<<杀菌、消毒和控制>>

书籍目录

Preface to the third edition
Preface to the first edition
Acknowledgements
About the authors
1. Sterilization, disinfection and the microbial target
2. Efficiency of sterilization
3. Preparation and packaging for sterilization
4. Principles of heat sterilization
5. Sterilization by dry heat
6. Sterilization by steam at increased pressure
7. Sterilization by gaseous chemicals
8. Sterilization by ionizing radiation
9. Aseptic filtration of liquids and air
10. Chemical disinfectants
11. Principles of chemical disinfection
12. Disinfection of living tissue
13. Microbial control of environments
14. Central sterilization and disinfection services
Index
