<<鉴别诊断入门>>

内容概要

This is an original and successful text which provides a series of tutorials in the problem-based approach to clinical medicine, as against the more common disease-based emphasis of most textbooks. It covers a full range of signs and symptoms as they are encountered in clinical practice and discusses them with the emphasis on those which are crucial in the differential diagnosis of the patient. Each chapter ends with an illustrated case history. Diagnostic algorithms help to summarise many of the cases and give an overview of the diagnostic pathway that has been set out in the text.

书籍目录

1. Palpitations2. Heart failure3. Peripheral oedema4. Central chest pain5. Shock6. Breathlessness and cyanosis7. Haemoptysis8. Pleural effusion9. Dysphagia10. Haematemesis and melaena11.
