Through detailed explanations and working C# code examples, this popular author team eases you into the world of ASP.NET development and gradually introduces you to all sorts of interesting ASP.NET tricks and tools. You'll quickly see how ASP.NET 2.0 is designed to ensure a significant reduction in the amount of code you have to write--and, in turn, to make your life easier. 作者简介： Chris Hart normally works at Trinity Expert Systems Plc, based in Coventry (UK) but is currently on maternity leave. She's worked on several major .NET, SharePoint, and CMS applications. She enjoys having a job where she gets to learn and play with new technologies on a regular basis, often working on-site with customers. She's been using .NET since the pre-Alpha days, and yet still enjoys the fun of working with beta software. Chris lives in Birmingham (UK, not Alabama) with her extremely understanding husband James and baby Nathan, and is discovering that motherhood is more challenging than developing a CMS systems for a major client. She's currently trying to work out how to make the home network toddlerproof. I'd like to thank James for being so understanding - this was the hardest one yet, and you were great. Thanks also to my brother Rob for your inspiring creativity - best of luck in your final year at Uni. Thanks to Lou for designing the Wrox United site, and for being such a fantastic friend. Finally, thanks to Nathan for waiting eight more days after I finished my final drafts before arriving into the world. Chris Hart contributed Chapters 3-5 and 11 and Appendix C to this book.
