

<<Chemical Process Tec>>

图书基本信息

书名：<<Chemical Process Technology化学处理技术>>

13位ISBN编号：9780471630098

10位ISBN编号：0471630098

出版时间：2001-5

出版时间：吉林长白山

作者：Jacob A. Moulijn 著

页数：453

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

内容概要

Chemical Process Technology is a comprehensive introduction, examining both the fundamental concepts and applied nature of this subject. Modern process development relies on a knowledge of many different disciplines and an application and integration of this knowledge. Chemical Process Technology provides an essential bridge between the chemical sciences and the chemical industry. It enables the reader to integrate fundamental knowledge of the basic disciplines, to understand the most important chemical processes, and to apply this knowledge and understanding to industrial processes. This innovative textbook examines both large-scale and small-scale chemical and biotechnology industries and aims to bring to life the concepts that form the basis of the process industry. Starting with a general look at the industry, subsequent chapters examine different processes in greater detail. Emphasis tends to be placed on chemical reactions and the reactor, both at the heart of each process, but coverage also includes feed pre-treatment and product separation. Features: A comprehensive and balanced introduction, providing an essential link between chemistry and the chemical industry Includes problems with their solutions to encourage a fuller understanding of the project. Many examples and case studies taken from a variety of modern industries Richly illustrated chapters, with many clearly developed flow diagrams and numerous figures Chemical Process Technology will be invaluable to all students of chemical engineering, biotechnology and industrial chemistry who need a modern introduction to chemical reactions and processes. The book will also be of interest to researchers and professionals needing a concise, up-to-date text on this diverse subject.

书籍目录

Preface1 Introduction2 The Chemical Industry 2.1 Introduction 2.2 Structure of the chemical industry
 2.3 Raw materials and energy 2.3.1 Fossil fuel consumption and reserves 2.3.2 Energy and the
 chemical industry 2.3.3 Composition of fossil fuels 2.4 Base chemicals3 Processes in the Oil Refinery
 3.1 Oil refinery - an overview 3.2 Physical processes 3.2.1 Desalting/dehydration 3.2.2 Crude
 distillation 3.2.3 Propane deasphalting 3.3 Thermal processes 3.3.1 Visbreaking 3.3.2
 Delayed coking 3.4 Catalytic processes 3.4.1 Catalytic cracking 3.4.2 Hydrotreating 3.4.3
 Hydrocracking 3.4.4 Catalytic reforming 3.4.5 Alkylation 3.5 Conversion of heavy residues
 3.5.1 Flexicoking 3.5.2 Catalytic hydrogenation of residues 3.6 Treatment of refinery gas streams
 3.6.1 Removal of H₂S from refinery exhaust gases 3.6.2 Recovery of hydrogen from refinery gas streams
 3.7 Current and future trends in oil refining 3.7.1 Reformulated gasoline 3.7.2 Diesel 3.7.3
 The use of zeolites for shape selectivity in the oil refinery 3.7.4 Alternative technology and fuels4 Steam
 Cracking: Production of Lower Alkenes 4.1 Introduction 4.2 Cracking reactions 4.2.1
 Thermodynamics 4.2.2 Mechanism 4.2.3 Kinetics 4.3 Industrial process 4.3.1 Influence
 of feedstock on steam cracker operation and products 4.3.2 Cracking furnace 4.3.3 Heat exchanger
 4.3.4 Coke 4.4 Product processing 4.5 Current and future developments 4.5.1 Selective
 dehydrogenation 4.5.2 Other sources of lower alkenes5 Synthesis Gas 5.1 Introduction 5.2 Synthesis
 gas from natural gas 5.2.1 Reactions and thermodynamics 5.2.2 Steam reforming process 5.2.3
 Advances in steam reforming 5.2.4 Autothermic reforming 5.2.5 Novel developments 5.3 Coal
 gasification 5.3.1 Gasification reactions 5.3.2 Thermodynamics 5.3.3 Current coal gasification
 processes 5.3.4 Recent developments 5.3.5 Applications 5.4 Purification and adjustment of
 synthesis gas 5.4.1 Conversion of carbon monoxide 5.4.2 Gas purification6 Bulk Chemicals and
 Synthetic Fuels Derived from Synthesis Gas 6.1 Ammonia 6.1.1 Background information 6.1.2
 Thermodynamics 6.1.3 Commercial ammonia synthesis reactors 6.1.4 Ammonia synthesis loop
 6.1.5 Integrated ammonia plant 6.1.6 Applications of ammonia 6.2 Methanol 6.2.1
 Background information 6.2.2 Thermodynamics 6.2.3 Synthesis gas for methanol production
 6.2.4 Methanol synthesis 6.2.5 Applications of methanol 6.3 Fischer-Tropsch process 6.3.1
 Reactions and thermodynamics 6.3.2 Reactors used in Fischer-Tropsch synthesis.....7 Inorganic Bulk
 Chemicals8 Homogeneous Catalysis9 Heterogeneous Catalysis-Concepts and Examples10 Fine Chemistry11
 Polymerization Processes12 Biotechnology13 Process DevelopmentAppendix A:Chchemical
 industry-FiguresAppendix B:Main Symbols used in Flow SchemesIndex
