<<破解 Google 地图 Hackin>>

内容概要

Great vacation photos—too bad you can't remember where you took them. And wouldn't it have been terrific to find a pizza joint when you bumped into your college buddy in that little ski town? Well, by making Google Maps and Google Earth do your bidding, you can find out not only where you're going, but where you've been. Get an aerial view of the beach in that picture. Pinpoint every Thai takeout in your girlfriend's zip code. Plan the Great International Rollercoaster Tour. Here's how. 作者简介： Martin "MC" Brown is the author of numerous computer books and a devoted mapping geek. He's a regular contributor to ServerWatch.com and IBM developerWorks, and he is currently a member of the MySQL Documentation Team. His expertise spans multiple platforms and development languages.
