## <<Transoesophageal Ech>>

### 内容概要

Transoesophageal Echocardiography ( TOE/TEE ) in cardiac patients is now almost routine.

Its use in cardiac monitoring has also extended to include critically ill patients for non-cardiac surgery and the intensive care setting.

Specific accreditation is required prior to practice of TOE/TEE involving a written examination and a documented logbook of experience.

This book has been specifically designed to help candidates pass the written exam and has been structured around the syllabus.

Providing a summary of all relevant information , this is an invaluable study aid.

Lists of further reading material are provided with every topic , including guidelines and safety , cardiomyopathies , heart disease , haemodynamic calculations and many more.

Each chapter ends with a series of exam-style questions for self-assessment.

An extremely useful book for trainee anaesthetists , intensivists , trainee cardiologists and cardiac surgeons.
