About Author

Jules Verne (1828-1905) used a combination of scientific facts and his imagination to take readers on extraordinary imaginative journeys to fantastic places. In such books as Around the World in Eighty Days, From the Earth to the Moon, and Journey to the Center of the Earth, he predicted many technological advances of the twentieth century, including the invention of the automobile, telephone, and nuclear submarines, as well as atomic power and travel to the moon by rocket.
