The LNCS Jounal on Transactions on Aspect-Oriented Software Development is devoted to all facets of aspect-oriented software development (AOSD) techniques in the context of all phases of the software life cycle, from requirements and design to implementation, maintenance and evolution. The focus of the journal is on approaches for systematic identification, modularization, representation and composition of crosscutting concerns, i.e., the aspects and evaluation of such approaches and their impact on improving quality attributes of software systems.　　　This volume, the second in the Transactions on Aspect-Oriented Software Development series, presents 2 regular revised papers, a guest editors' introduction, and 6 papers in a special section that have been through a careful peer reviewing process by the journal's Editorial Board. Besides a wide range of topics from software design to implementation of aspect-oriented languages, the 6 papers of the special section concentrate on AOP systems, software and middleware.

On Horizontal Specification Architectures and Their Aspect-Oriented　ImplementationsA Framework for Policy Driven Auto-adaptive Systems Using Dynamic　Framed AspectsFocus: AOP Systems, Software and Middleware　Guest Editors' Introduction　Aspect-Oriented Development of Crosscutting Features in Distributed, Heterogeneous Systems　Shakeins: Nonintrusive Aspects for Middleware Frameworks　Run-Time and Atomic Weaving of Distributed Aspects　TOSKANA: A Toolkit for Operating System Kernel Aspects　Lean and Efficient System Software Product Lines: Where Aspects　Beat Objects　Providing Configurable QoS Management in Real-Time Systems　with QoS Aspect PackagesAuthor Index
