

<<材料力学>>

图书基本信息

书名：<<材料力学>>

13位ISBN编号：9787111350118

10位ISBN编号：7111350111

出版时间：2011-7

出版时间：机械工业出版社

作者：（美）盖尔 著，（美）古德诺 著

页数：782

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<材料力学>>

内容概要

《材料力学(英文版)(原书第7版)》叙述简洁、插图清晰、精美。第7版更新了习题，渗透了作者在该领域的新思想，更为精炼。更加可读。

《材料力学(英文版)(原书第7版)》融汇、贯通了著名力学家和教育家铁摩辛柯(S . P . Timoshenko)的力学教育理念，有利于初学者从个别到一般，由感性到理性地把握该门课程。该书共12章，内容包括拉伸、压缩和剪切，轴向载荷构件，扭转变形，剪切力和弯矩，梁的应力，应力和应变分析，水平应力应用，梁的挠度，超静定梁，柱。矩心和转动惯量等，供读者阅读参考。

<<材料力学>>

作者简介

作者：（美国）盖尔（James M.Gere）（美国）吉德诺（Barry J.Goodno）

<<材料力学>>

书籍目录

Contents

Preface

1. Tension , Compression , and Shear

- 1.1 Introduction to Mechanics of Materials
- 1.2 Normal Stress and Strain
- 1.3 Mechanical Properties of Materials
- 1.4 Elasticity , Plasticity , and Creep
- 1.5 Linear Elasticity. Hooke'S Law.and Poisson'S Ratio 1
- 1.6 Shear Stress and Strain
- 1.7 Allowable Stresses and Allowable Loads
- 1.8 Design for Axial Loads and Direct Shear

Problems

2. Axially Loaded Members

- 2.1 IntroductiOn
- 2.2 Changes in Lengths of Axially Loaded Members
- 2.3 Changes in Lengths under Nonuniform Conditions
- 2.4 Statically Indeterminate Structures
- 2.5 Thermal Effects.Misfits.and PrestrairlS
- 2.6 Stresses on Inclined Sections
- 2.7 Strain Energy
- 2.8 Impact Loading
- 2.9 Repeated Loading and Fatigue
- 2.10 Stress Concentrations
- 2.11 Nonlinear Behavior
- 2.12 Elastoplastic Analysis

Problems

3. Torsion

- 3.1 IntrOductiOn
- 3.2 TDrsional Deformations of a Circular Bar
- 3.3 Circular Bars of Linearly Elastic Materials
- 3.4 Nonuniform Torsion
- 3.5 Stresses and Strains in Pure Shear
- 3.6 Relationship Between Moduli of Elasticity E and G
- 3.7 Transmission of Power by Circular ShaftS
- 3.8 Statically Indeterminate Torsional Members
- 3.9 Strain Energy in Torsion and Pure Shear
- 3.10 Thin-Walled Tubes
- 3.11 Stress COncentrations in Torsion

Problems

4. Shear FoFees and Bending Moments

- 4.1 Introduction
- 4.2 Types of Beams.LoadS.and Reactions
- 4.3 Shear Forces and Bending Moments
- 4.4 Relationships Between Loads.Shear Forces.and Bending Moments
- 4.5 Shear-Force and Bending-Moment Diagrams

<<材料力学>>

Problems

5. Stresses in Beams (Basic Topics)

- 5.1 Introduction
- 5.2 Pure Bending and Nonuniform Bending
- 5.3 Curvature of a Beam
- 5.4 Longitudinal Strains in Beams
- 5.5 Normal Stresses in Beams of Linearly Elastic Materials
- 5.6 Design of Beams for Bending Stresses
- 5.7 Nonprismatic Beams
- 5.8 Shear Stresses in Beams of Rectangular Cross Section
- 5.9 Shear Stresses in Beams of Circular Cross Section
- 5.10 Shear Stresses in the Webs of Beams with Flanges
- 5.11 Built-Up Beams and Shear Flow
- 5.12 Beams with Axial Loads
- 5.13 Stress Concentrations in Bending

Problems

6. Stresses in Beams (Advanced Topics)

- 6.1 Introduction
- 6.2 Composite Beams
- 6.3 Transformed-Section Method
- 6.4 Doubly Symmetric Beams with Inclined Loads
- 6.5 Bending of Unsymmetric Beams
- 6.6 The Shear-Center Concept
- 6.7 Shear Stresses in Beams of Thin-Walled Open Cross Sections
- 6.8 Shear Stresses in Wide-Flange Beams
- 6.9 Shear Centers of Thin-Walled Open Sections
- 6.10 Elastoplastic Bending

Problems

7. Analysis of Stress and Strain

- 7.1 Introduction
- 7.2 Plane Stress
- 7.3 Principal Stresses and Maximum Shear Stresses
- 7.4 Mohr's Circle for Plane Stress
- 7.5 Hooke's Law for Plane Stress
- 7.6 Triaxial Stress
- 7.7 Plane Strain

Problems

8. Applications of Plane Stress (Pressure Vessels , Beams , and Combined Loadings)

- 8.1 Introduction
- 8.2 Spherical Pressure Vessels
- 8.3 Cylindrical Pressure Vessels
- 8.4 Maximum Stresses in Beams
- 8.5 Combined Loadings

Problems

9. Deflections of Beams

- 9.1 Introduction

<<材料力学>>

- 9.2 Differential Equations of the Deflection Curve
- 9.3 Deflections by Integration of the Bending-Moment Equation
- 9.4 Deflections by Integration of the Shear-Force and Load Equations
- 9.5 Method of Superposition
- 9.6 Moment-Area Method
- 9.7 Nonprismatic Beams
- 9.8 Strain Energy of Bending
- 9.9 Castigliano'S Theorem
- 9.10 Deflections Produced by Impact
- 9.11 Temperature Effects

Problems

10. Statically Indeterminate Beams

- 10.1 Introduction
- 10.2 Types of Statically Indeterminate Beams
- 10.3 Analysis by the Differential Equations of the Deflection

Curve

- 10.4 Method of Superposition
- 10.5 Temperature Effects
- 10.6 Longitudinal Displacements at the Ends of a Beam

Problems

11. Columns

- 11.1 Introduction
- 11.2 Buckling and Stability
- 11.3 Columns with Pinned Ends
- 11.4 Columns with Other Support Conditions
- 11.5 Columns with Eccentric Axial Loads
- 11.6 The Secant Formula for Columns
- 11.7 Elastic and Inelastic Column Behavior
- 11.8 Inelastic Buckling

Problems

12. Review of Centroids and Moments of Inertia

- 12.1 Introduction
- 12.2 Centroids of Plane Areas
- 12.3 Centroids of Composite Areas
- 12.4 Moments of Inertia of Plane Areas
- 12.5 Parallel-Axis Theorem for Moments of Inertia
- 12.6 Polar Moments of Inertia
- 12.7 Products of Inertia
- 12.8 Rotation of Axes
- 12.9 Principal Axes and Principal Moments of Inertia

Problems

References and Historical Notes

Appendix A : Systems of Units and Conversion Factors

Appendix B : Problem Solving

Appendix C : Mathematical Formulas

Appendix D : Properties of Plane Areas

<<材料力学>>

Appendix E : Properties of Structural-Steel Shapes

Appendix F : Properties of Solid Timber

Appendix G : Deflections and Slopes of Beams

Appendix H : Properties of Materials

Answers to Problems

Index

章节摘录

版权页：插图：Measurement systems have been a necessity since people first began to build and barter, and every ancient culture developed some sort of measurement system to serve its needs. Standardization of units took place gradually over the centuries, often through royal edicts. Development of the British Imperial System from earlier measurement standards began in the 13th century and was well established by the 18th century. The British system spread to many parts of the world, including the United States, through commerce and colonization. In the United States the system gradually evolved into the U.S. Customary System (USCS) that is in common use today. The concept of the metric system originated in France about 300 years ago and was formalized in the 1790s, at the time of the French Revolution. France mandated the use of the metric system in 1840, and since then many other countries have done the same. In 1866 the United States Congress legalized the metric system without making it compulsory. A new system of units was created when the metric system underwent a major revision in the 1950s. Officially adopted in 1960 and named the International System of Units (Système International d'Unités), this newer system is commonly referred to as SI. Although some SI units are the same as in the old metric system, SI has many new features and simplifications. Thus, SI is an improved metric system. Length, time, mass, and force are the basic concepts of mechanics for which units of measurement are needed. However, only three of these quantities are independent since all four of them are related by Newton's second law of motion.
