<<免疫学>>

内容概要

The 6th edition of immunology has been radically revised and updated. The first half of the book covering basic immunology has been completely re-organized. All chapters now include Critical Thinking Boxes, with explanations listed at the back of the book. In the clinical chapters, and in accordance with the move towards integrated, problem-based teaching, these Boxes take the form of clinical vignettes. 250 top quality photographs depict clinical aspects of immunology while over 400 conceptual diagrams simplify even the most complex immunologic processes.

书籍目录

Contributors  
1. Introduction to the immune system  
2. Cells, Tissues and organs of the immune system  
3. Cell migration and inflammation  
4. Antibodies  
5. T-cell receptors and major histo-compatibility complex molecules  
6. Antigen presentation  
7. Cytokines and cytokine receptors  
8. Cell cooperation the antibody response  
9. Mononuclear phagocytes in immune defence  
10. Cell-mediated cytotoxicity  
11. Regulation of the immune response  
12. Immunological tolerance  
13. Evolution of immunity  
14. Immunity to viruses  
15. Immunity to bacteria and fungi  
16. Immunity to protozoa and worms  
17. Vaccination  
18. Tumour immunology  
19. Primary immunodeficiency  
20. Secondary immunodeficiency  
21. Hypersensitivity-Type 1  
22. Hypersensitivity-Type 2  
23. Hypersensitivity-Type 3  
24. Hypersensitivity-Type 4  
25. Transplantation and rejection  
26. Autoimmunity and autoimmune disease  
27. Immunological techniques  
Appendices  
Glossary  
Explanations for critical thinking and case studies  
Index
