

图书基本信息

书名：<<TCP/IP网络互连技术 卷 --第3版--英文>>

13位ISBN编号：9787302029465

10位ISBN编号：7302029466

出版时间：1998-07

出版时间：清华大学出版社

作者：科默(美)

页数：613

内容概要

本书是Douglas Comer教授所著网络互连技术系列的第1卷。

详尽地讲解了因特网的原理、网络体系结构、TCP/IP协议簇。

本书包括了TCP/IP，因特网各个组成部分的设计及其工作，以每个协议如ARP，PARP，IP，TCP，UDP，RIP，OSPF等等都有详细阐述。

书籍目录

- Contents
- Foreword
- Preface
- Chapter 1 Introduction And Overview
 - 1.1 The Motivation For Internetworking
 - 1.2 The TCP/IP Internet
 - 1.3 Internet Services
 - 1.4 History And Scope Of The Internet
 - 1.5 The Internet Architecture Board
 - 1.6 The IAB Reorganization
 - 1.7 The Internet Society
 - 1.8 Internet Request For Comments
 - 1.9 Internet Protocols And Standardization
 - 1.10 Future Growth And Technology
 - 1.11 Organization Of The Text
 - 1.12 Summary
- Chapter 2 Review Of Underlying Network Technologies
 - 2.1 Introduction
 - 2.2 Two Approaches To Network Communication
 - 2.3 Wide Area And Local Area Networks
 - 2.4 Ethernet Technology
 - 2.5 Fiber Distributed Data Interconnect (FDDI)
 - 2.6 Asynchronous Transfer Mode
 - 2.7 ARPANET Technology
 - 2.8 National Science Foundation Networking
 - 2.9 ANSNET
 - 2.10 A Planned Wide Area Backbone
 - 2.11 Other Technologies Over Which TCP/IP Has Been Used
 - 2.12 Summary And Conclusion
- Chapter 3 Internetworking Concept And Architectural Model
 - 3.1 Introduction
 - 3.2 Application-Level Interconnection
 - 3.3 Network-Level Interconnection
 - 3.4 Properties Of The Internet
 - 3.5 Internet Architecture
 - 3.6 Interconnection Through IP Routers
 - 3.7 The User's View
 - 3.8 All Networks Are Equal
 - 3.9 The Unanswered Questions
 - 3.10 Summary
- Chapter 4 Internet Addresses
 - 4.1 Introduction
 - 4.2 Universal Identifiers
 - 4.3 Three Primary Classes Of IP Addresses
 - 4.4 Addresses Specify Network Connections

- 4.5 Network And Broadcast Addresses
- 4.6 Limited Broadcast
- 4.7 Interpreting Zero To Mean "This"
- 4.8 Weaknesses In Internet Addressing
- 4.9 Dotted Decimal Notation
- 4.10 Loopback Address
- 4.11 Summary Of Special Address Conventions
- 4.12 Internet Addressing Authority
- 4.13 An Example
- 4.14 Network Byte Order
- 4.15 Summary
- Chapter 5 Mapping Internet Addresses To Physical Addresses (ARP)
- 5.7 Introduction
- 5.2 The Address Resolution Problem
- 5.3 Two Types Of Physical Addresses
- 5.4 Resolution Through Direct Mapping
- 5.5 Resolution Through Dynamic Binding
- 5.6 The Address Resolution Cache
- 5.7 ARP Refinements
- 5.8 Relationship Of ARP To Other Protocols
- 5.9 ARP Implementation
- 5.10 ARP Encapsulation And Identification
- 5.11 ARP Protocol Format
- 5.12 Summary
- Chapter 6 Determining An Internet Address At Startup (RARP)
- 6.7 Introduction
- 6.2 Reverse Address Resolution Protocol (RARP)
- 6.3 Timing RARP Transactions
- 6.4 Primary And Backup RARP Servers
- 6.5 Summary
- Chapter 7 Internet Protocol: Connectionless Datagram Delivery
- 7.1 Introduction
- 7.2 A Virtual Network
- 7.3 Internet Architecture And Philosophy
- 7.4 The Concept Of Unreliable Delivery
- 7.5 Connectionless Delivery System
- 7.6 Purpose Of The Internet Protocol
- 7.7 The Internet Datagram
- 7.8 Internet Datagram Options
- 7.9 Summary
- Chapter 8 Internet Protocol: Routing IP Datagrams
- 8.1 Introduction
- 8.2 Routing In An Internet
- 8.3 Direct And Indirect Delivery
- 8.4 Table-Driven IP Routing
- 8.5 Next-Hop Routing
- 8.6 Default Routes

- 8.7 Host-Specific Routes
- 8.8 The IP Routing Algorithm
- 8.9 Routing With IP Addresses
- 8.10 Handling Incoming Datagrams
- 8.11 Establishing Routing Tables
- 8.12 Summary
- Chapter 9 Internet Protocol: Error And Control Messages (ICMP)
- 9.7 Introduction
- 9.2 The Internet Control Message Protocol
- 9.3 Error Reporting vs. Error Correction
- 9.4 ICMP Message Delivery
- 9.5 ICMP Message Format
- 9.6 Testing Destination Reachability And Status (Ping)
- 9.7 Echo Request And Reply Message Format
- 9.8 Reports Of Unreachable Destinations
- 9.9 Congestion And Datagram Flow Control
- 9.10 Source Quench Format
- 9.11 Route Change Requests From Routers
- 9.12 Detecting Circular Or Excessively Long Routes
- 9.13 Reporting Other Problems
- 9.14 Clock Synchronization And Transit Time Estimation
- 9.15 Information Request And Reply Messages
- 9.16 Obtaining A Subnet Mask
- 9.17 Summary
- Chapter 10 Subnet And Supernet Address Extensions
- 10.1 Introduction
- 10.2 Review Of Relevant Facts
- 10.3 Minimizing Network Numbers
- 10.4 Transparent Routers
- 10.5 Proxy ARP
- 10.6 Subnet Addressing
- 10.7 Flexibility In Subnet Address Assignment
- 10.8 Implementation Of Subnets With Masks
- 10.9 Subnet Mask Representation
- 10.10 Routing In The Presence Of Subnets
- 10.11 The Subnet Routing Algorithm
- 10.12 A Unified Routing Algorithm
- 10.13 Maintenance Of Subnet Masks
- 10.14 Broadcasting To Subnets
- 10.15 Supernet Addressing
- 10.16 The Effect Of Supernetting On Routing
- 10.17 Summary
- Chapter 11 Protocol Layering
- 11.1 Introduction
- 11.2 The Need For Multiple Protocols
- 11.3 The Conceptual Layers Of Protocol Software
- 11.4 Functionality Of The Layers

- 11.5 X.25 And Its Relation To The ISO Model
- 11.6 Differences Between X.25 And Internet Layering
- 11.7 The Protocol Layering Principle
- 11.8 Layering In The Presence Of Network Substructure
- 11.9 Two Important Boundaries In The TCP/IP Model
- 11.10 The Disadvantage Of Layering
- 11.11 The Basic Idea Behind Multiplexing And Demultiplexing
- 11.12 Summary
- Chapter 12 User Datagram Protocol (UDP)
- 12.1 Introduction
- 12.2 Identifying The Ultimate Destination
- 12.3 The User Datagram Protocol
- 12.4 Format Of UDP Messages
- 12.5 UDP Pseudo-Header
- 12.6 UDP Encapsulation And Protocol Layering
- 12.7 Layering And The UDP Checksum Computation
- 12.8 UDP Multiplexing, Demultiplexing, And Ports
- 12.9 Reserved And Available UDP Port Numbers
- 12.10 Summary
- Chapter 13 Reliable Stream Transport Service (TCP)
- 13.1 Introduction
- 13.2 The Need For Stream Delivery
- 13.3 Properties Of The Reliable Delivery Service
- 13.4 Providing Reliability
- 13.5 The Idea Behind Sliding Windows
- 13.6 The Transmission Control Protocol
- 13.7 Ports, Connections, And Endpoints
- 13.8 Passive And Active Opens
- 13.9 Segments, Streams, And Sequence Numbers
- 13.10 Variable Window Size And Flow Control
- 13.11 TCP Segment Format
- 13.12 Out Of Band Data
- 13.13 Maximum Segment Size Option
- 13.14 TCP Checksum Computation
- 13.15 Acknowledgements And Retransmission
- 13.16 Timeout And Retransmission
- 13.17 Accurate Measurement Of Round Trip Samples
- 13.18 Karn's Algorithm And Timer Backoff
- 13.19 Responding To High Variance In Delay
- 13.20 Response To Congestion
- 13.21 Establishing A TCP Connection
- 13.22 Initial Sequence Numbers
- 13.23 Closing a TCP Connection
- 13.24 TCP Connection Reset
- 13.25 TCP State Machine
- 13.26 Forcing Data Delivery
- 13.27 Reserved TCP Port Numbers

- 13.28 TCP Performance
- 13.29 Silly Window Syndrome And Small Packets
- 13.30 Avoiding Silly Window Syndrome Summary
- Chapter 14 Routing: Cores, Peers, And Algorithms (GGP)
- 14.1 Introduction
- 14.2 The Origin Of Routing Tables
- 14.3 Routing With Partial Information
- 14.4 Original Internet Architecture And Cores
- 14.5 Core Routers
- 14.6 Beyond The Core Architecture To Pee Backbones
- 14.7 Automatic Route Propagation
- 14.8 Vector Distance (Bellman-Ford) Routing
- 14.9 Gateway-To-Gateway Protocol (GGP)
- 14.10 GGP Message Formats
- 14.11 Link-State (SPF) Routing
- 14.12 SPF Protocols
- 14.13 Summary
- 15.4 Autonomous System Concept
- 15.5 Exterior Gateway Protocol (EGP) 254
- 15.6 EGP Message Header
- 15.7 EGP Neighbor Acquisition Messages
- 15.8 EGP Neighbor Reachability Messages
- 15.9 EGP Poll Request Messages
- 15.10 EGP Routing Update Messages
- 15.11 Measuring From The Receiver's Perspective
- 15.12 The Key Restriction Of EGP
- 15.13 Technical Problems
- 15.14 Decentralization Of Internet Architecture
- 15.15 Beyond Autonomous Systems
- 15.16 Summary
- Chapter 16 Routing: In An Autonomous System (RIP, OSPF, HELLO)
- 16.1 Introduction
- 16.2 Static Vs. Dynamic Interior Routes
- 16.3 Routing Information Protocol (RIP)
- 16.4 The Hello Protocol
- 16.5 Combining RIP, Hello, And EGP
- 16.6 The Open SPF Protocol (OSPF)
- 16.7 Routing With Partial Information
- 16.8 Summary
- Chapter 17 Internet Multicasting (IGMP)
- 17.1 Introduction
- 17.2 Hardware Broadcast
- 17.3 Hardware Multicast
- 17.4 IP Multicast
- 17.5 IP Multicast Addresses
- 17.6 Mapping IP Multicast To Ethernet Multicast
- 17.7 Extending IP To Handle Multicasting

- 17.8 Internet Group Management Protocol
- 17.9 IGMP Implementation
- 17.10 Group Membership State Transitions
- 17.11 IGMP Message Format
- 17.12 Multicast Address Assignment
- 17.13 Propagating Routing Information
- 17.14 The Mrouted Program
- 17.15 Summary
- Chapter 18 TCP/IP Over ATM Networks
- 18.1 Introduction
- 18.2 ATM Hardware
- 18.3 Large ATM Networks
- 18.4 The Logical View Of An ATM Network
- 18.5 The Two ATM Connection Paradigms
- 18.6 Paths, Circuits, And Identifiers
- 18.7 ATM Cell Transport
- 18.8 ATM Adaptation Layers
- 18.9 AAL5 Convergence, Segmentation, And Reassembly
- 18.10 Datagram Encapsulation And IP MTU Size
- 18.11 Packet Type And Multiplexing
- 18.12 IP Address Binding In An ATM Network
- 18.13 Logical IP Subnet Concept
- 18.14 Connection Management
- 18.15 Address Binding; Within An LIS
- 18.16 ATMARP Packet Format
- 18.17 Using ATMARP Packets To Determine An Address
- 18.18 Obtaining Entries For A Server Database
- 18.19 Timing Out ATMARP Information In A Server
- 18.20 Timing Out ATMARP Information In A Host Or Route
- 18.21 Summary
- Chapter 19 Client-Server Model Of Interaction
- 19.1 Introduction
- 19.2 The Client-Server Model
- 19.3 A Simple Example: UDP Echo Server
- 19.4 Time And Date Service
- 19.5 The Complexity of Servers
- 19.6 RARP Server
- 19.7 Alternatives To The Client-Server Model
- 19.8 Summary
- Chapter 20 The Socket Interface
- 20.1 Introduction
- 20.2 The UNIX 110 Paradigm And Network 110
- 20.3 Adding Network I/O to UNIX
- 20.4 The Socket Abstraction
- 20.5 Creating A Socket
- 20.6 Socket Inheritance And Termination
- 20.7 Specifying A Local Address

- 20.8 Connecting Sockets To Destination Adresse.
- 20.9 Sending Data Through A Socket
- 20.10 Receiving Data Through A Socket
- 20.11 Obtaining Local And Remote Socket Addresses
- 20.12 Obtaining And Setting Socket Options
- 20.13 Specifying A Queue Length For A Server
- 20.14 How A Server Accepts Connections
- 20.15 Servers That Handle Multiple Services
- 20.16 Obtaining And Setting Host Names
- 20.17 Ohtaining And Setting The Internal Host Domain
- 20.18 BSDUNIX Network Library Calls
- 20.19 Network Byte Order Conversion Routines
- 20.20 IPAddress Manipulation Routines
- 20.21 Accessing The Domain Name System
- 20.22 Ohtaining Information About Hosts
- 20.23 Obtaining Information About Networks
- 20.24 Obtaining Information About Protocols
- 20.25 Obtaining Information About Network Services
- 20.26 An Example Client
- 20.27 An Example Server
- Summary
- Chapter 21 Bootstrap And Autoconfiguration (BOOTP, DHCP)
- 21.1 Introduction
- 21.2 The Need For An Alternative To RARP
- 21.3 Using IP To Determine An IP Address
- 21.4 The BOOTP Retransmission Policy
- 21.5 The BOOTP Message Format
- 21.6 The Two-Slep Boolstrap Procedure
- 21.7 Vendor-Specific Field
- 21.8 The Need For Dynamic Configuration
- 21.9 Dynamic Host Configuration
- 21.10 Dynamic IP Address Assignment
- 21.11 Obtaining Mulliple Addresses
- 21.12 Address A cquisition States
- 21.13 Early Lease Termination
- 21.14 Lease Renewal States
- 21.15 DHCP Message Format
- 21.16 DHCP Options And Message Type
- 29.6 Features Of IPv6
- 29.7 General Form OfAn IPv6 Datagram
- 29.8 IPv6 Base Header Format
- 29.9 IPv6 Exlension Headers
- 29.10 Parsing An IPv6 Dalagram
- 29.11 IPv6 Fragmentation And Reassembly
- 29.12 The Consequence Of End-To-End Fragmentatwn
- 29.13 IPv6 Source Routing
- 29.14 IPv6 Options

29.15 Size OfThe IPv4 Address Space

29.16 IPv6 Colon Hexadecimal Notation

29.17 Three Basic IPv6 Address Types

29.18 The Duality OfBroadcast And Multicast

29.19 An Engineering Choice And Simulated Broadcast

29.20 Proposed IPv6 Address Space Assignment

29.21 IPv4 Address Encoding And Transition

29.22 Providers, Subscribers, And Address Hierarchy

29.23 Additional Hierarchy

29.24 Summary

Appendix-I A Guide To RFCs

Appendix - 2 Glossary Of Internetworking Terms And Abbreviations
