

<<中级材料力学>>

图书基本信息

书名：<<中级材料力学>>

13位ISBN编号：9787302062646

10位ISBN编号：7302062641

出版时间：2003-1

出版时间：清华大学出版社

作者：巴勃

页数：594

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<中级材料力学>>

内容概要

《中级材料力学》是为理工科大学生和工程设计人员编写的材料力学、材料强度和应力分析教材，覆盖了该领域二级教程所需要的基本内容。

书中通过许多日常生活和工程应用中的实际例子帮助读者建立关于力学概念的直观感性认识。

告诉读者如何通过简单试验去验证理论概念，从而使他们能深入理解在工程设计公式中如何应用这些概念。

广泛收集了大量基本的和高难度的习题，并注意与工程实际和设计经验紧密联系。

《中级材料力学》积累了作者的教学经验，对一些通常认为枯燥而困难的问题给出了新颖而现代的处理方法。

《中级材料力学》是本面向工程设计的力学教材，对从事应力分析和强度设计的科技工作者、讲授高等材料力学和应力分析课程的教师以及理工院校的高年级学生和研究生是一本很好的参考书。

书籍目录

CONTENTS

Chapter 1 Introduction

1.1 The Engineering Design Process

1.1.1 Economics of design calculations

2.1.2 Design Optimization

2.1.2.1 Predicting the behavior of the component

4.1.2.2 Approximate solutions

5.1.3 Relative Magnitude of Different Effects

6.1.4 Formulating and Solving Problems

8.1.4.1 Use of procedures

9.1.4.2 Inverse problems

10.1.4.3 Physical uniqueness and existence arguments

11.1.5 Review of Elementary Mechanics of Materials

12.1.5.1 Definition of stress components

12.1.5.2 Transformation of stress components

13.1.5.3 Displacement and strain

13.1.5.4 Hookes law

15.1.5.5 Bending of beams

17.1.5.6 Torsion of circular bars

18.1.6 Summary

18.1.6.1 Further Reading

19.1.6.2 Problems

19.1.6.3 Chapter 2 Material Behavior and Failure

2.1 Transformation of Stresses

2.1.1 Review of two-dimensional results

2.1.2 Principal stresses in three dimensions

3.0.2 Failure Theories for Isotropic Materials

3.2.1 The failure surface

3.2.2 The shape of the failure envelope

3.2.3 Ductile failure (yielding)

3.2.4 Brittle failure

5.0.3 Cyclic Loading and Fatigue

6.2.3.1 Experimental data

6.2.3.2 Statistics and the size effect

6.2.3.3 Factors influencing the design stress

7.2.3.4 Effect of a superposed mean stress

7.2.3.5 Summary of the design process

8.0.2.4 Summary

8.0.2.5 Further Reading

8.0.2.6 Problems

8.0.2.7 Chapter 3 Energy Methods

9.7.3.1 Work Done on Loading and Unloading

9.8.3.2 Strain Energy

10.0.3.3 Load-Displacement Relations

10.1.3.3.1 Beams with continuously varying bending moments

10.4.3.3.2 Axial loading and torsion

10.5.3.3.3 More general expressions for strain energy

10.7.3.3.4 Strain energy associated with shear forces in beams

10.7.3.4 Potential Energy

10.7.3.5 The Principle of Stationary Potential Energy

1.10.3.5.1 Potential energy due to an external force

1.13.3.5.2 Problems with several degrees of freedom

1.13.3.5.3 Nonlinear problems

1.16.3.6 The Rayleigh-Ritz Method

1.18.3.6.1 Improving the accuracy

1.21.3.6.2 Improving the back of the envelope approximation

1.23.3.7 Castiglianos First Theorem

1.29.3.8 Linear Elastic Systems

1.33.3.8.1 Strain energy

1.33.3.8.2 Bounds on the coefficients

1.36.3.8.3 Use of the reciprocal theorem

1.37.3.9 The Stiffness Matrix

1.38.3.9.1 Structures consisting of beams

1.40.3.9.2 Assembly of the stiffness matrix

1.43.3.10 Castiglianos Second Theorem

1.43.3.10.1 Use of the theorem

1.45.3.10.2 Dummy loads

1.47.3.10.3 Unit load method

1.50.3.10.4 Formal procedure for using Castiglianos second theorem

1.51.3.10.5 Indeterminate problems

1.51.3.10.6 Three-dimensional problems

1.55.3.11 Summary

1.57.3.11 Further Reading

1.58.3.11 Problems

1.58.3.11.1 Chapter 4 Unsymmetrical Bending

1.7.4.1.1 Stress Distribution in Bending

1.7.4.1.1.1 Bending about one axis

1.7.4.1.1.2 Generalized bending

1.8.0.4.1.3 Force resultants

1.8.1.4.1.4 Uncoupled problems

1.8.2.4.1.5 Coupled problems

1.8.4.4.2 Displacements of the Beam

1.8.7.4.3 Second Moments of Area

1.9.0.4.3.1 Finding the centroid

1.9.1.4.3.2 The parallel axis theorem

1.9.2.4.3.3 Thin-walled sections

1.9.6.4.4 Further Properties of Second Moments

1.9.8.4.4.1 Coordinate transformation

1.9.8.4.4.2 Mohrs circle of second moments

2.0.4.4.3 Solution of unsymmetrical bending problems in principal coordinates

2.0.3.4.4 Design estimates for the behavior of unsymmetrical sections

2.0.6.4.4.5 Errors due to misalignment

2.0.9.4.5 Summary

2.1.1.1 Further Reading

2.1.1.2 Problems

2.1.1.3 Chapter 5 Nonlinear and Elastic-Plastic Bending

2.2.5.1 Kinematics of Bending

2.2.5.2 Elastic-Plastic Constitutive Behavior

2.2.7.5.2.1 Unloading and reloading

2.2.8.5.2.2 Yield during reversed loading

2.2.9.5.2.3 Elastic-perfectly plastic material

2.3.0.5.3 Stress Fields in Nonlinear and Inelastic Bending

2.3.1.5.3.1 Force and moment resultants

2.3.2.5.4 Pure Bending about an Axis of Symmetry

2.3.3.5.4.1 Symmetric problems for elastic-perfectly plastic materials

2.3.4.5.4.2 Fully plastic moment and shape factor

2.3.9.5.5 Bending of a Symmetric Section about an Orthogonal Axis

2.4.0.5.5.1 The fully plastic case

2.4.0.5.5.2 Nonzero axial force

2.4.3.5.5.3 The partially plastic solution

2.4.5.5.6 Unsymmetrical Plastic Bending

2.4.8.5.7 Unloading, Springback and Residual Stress

2.5.2.5.7.1 Springback and residual curvature

2.5.4.5.7.2 Reloading and shakedown

2.5.7.5.8 Limit Analysis in the Design of Beams

2.5.8.5.8.1 Plastic hinges

2.5.9.5.8.2 Indeterminate Problems

2.5.9.5.9 Summary

2.6.2.6.2 Further Reading

2.6.3.6.3 Problems

2.6.3.6.3.1 Chapter 6 Shear and Torsion of Thin-Walled Beams

2.7.5.6.1 Derivation of the Shear Stress Formula

2.7.6.6.1.1 Choice of cut and direction of the shear stress

2.8.0.6.1.2 Location and magnitude of the maximum shear stress

2.8.5.6.1.3 Welds, rivets, and bolts

2.8.7.6.1.4 Curved sections

2.8.9.6.2 Shear Center

2.9.1.6.2.1 Finding the shear center

2.9.1.6.3 Unsymmetrical Sections

2.9.8.6.3.1 Shear stress for an unsymmetrical section

2.9.8.6.3.2 Determining the shear center

2.9.8.6.4 Closed Sections

3.0.0.6.4.1 Determination of the shear stress distribution

3.0.0.6.5 Pure Torsion of

Closed Thin-Walled Sections 3056.5.1 Torsional stiffness 3066.5.2 Design considerations in torsion 3096.6 Finding the Shear Center for a Closed Section 3106.6.1 Twist due to a shear force 3126.6.2 Multicell sections 3156.7 Torsion of Thin-Walled Open Sections 3166.7.1 Loading of an open section away from its shear center 3196.8 Summary 322 Further Reading 323 Problems 323 Chapter 7 Beams on Elastic Foundations 3397.1 The Governing Equation 3407.1.1 Solution of the governing equation 3417.2 The Homogeneous Solution 3427.2.1 The semi-infinite beam 3437.3 Localized Nature of the Solution 3477.4 Concentrated Force on an Infinite Beam 3497.4.1 More general loading of the infinite beam 3507.5 The Particular Solution 3517.5.1 Uniform loading 3527.5.2 Discontinuous loads 3547.6 Finite Beams 3567.7 Short Beams 3587.8 Summary 361 Further Reading 361 Problems 362 Chapter 8 Membrane Stresses in Axisymmetric Shells 3698.1 The Meridional Stress 3708.1.1 Choice of cut 3738.2 The Circumferential Stress 3758.2.1 The radii of curvature 3778.2.2 Sign conventions 3798.3 Self-Weight 3818.4 Relative Magnitudes of Different Loads 3848.5 Strains and Displacements 3868.5.1 Discontinuities 3878.6 Summary 389 Further Reading 390 Problems 390 Chapter 9 Axisymmetric Bending of Cylindrical Shells 4019.1 Bending Stresses and Moments 4019.2 Deformation of the Shell 4039.3 Equilibrium of the Shell Element 4059.4 The Governing Equation 4069.4.1 Solution strategy 4089.5 Localized Loading of the Shell 4119.6 Shell Transition Regions 4129.6.1 The cylinder to cone transition 4159.6.2 Reinforcing rings 4179.7 Thermal Stresses 4199.8 The ASME Pressure Vessel Code 4219.9 Summary 421 Further Reading 422 Problems 422 Chapter 10 Thick-Walled Cylinders and Disks 42910.1 Solution Method 42910.1.1 Stress components and the equilibrium condition 43010.1.2 Strain, displacement, and compatibility 43110.1.3 The elastic constitutive law 43210.2 The Thin Circular Disk 43410.3 Cylindrical Pressure Vessels 44010.4 Composite Cylinders, Limits and Fits 44310.4.1 Solution procedure 44410.4.2 Limits and fits 44710.5 Plastic Deformation of Disks and Cylinders 44810.5.1 First yield 44910.5.2 The fully plastic solution 45010.5.3 Elastic-plastic problems 45210.5.4 Other failure modes 45510.5.5 Unloading and residual stresses 45610.6 Summary 457 Further Reading 458 Problems 458 Chapter 11 Curved Beams 46711.1 The Governing Equation 46711.1.1 Rectangular and circular cross sections 47011.1.2 The bending moment 47111.1.3 Composite cross sections 47411.1.4 Axial loading 47411.2 Radial Stresses 48011.3 Distortion of the Cross Section 48211.4 Range of Application of the Theory 48411.5 Summary 485 Further Reading 485 Problems 485 Chapter 12 Elastic Stability 49112.1 Uniform Beam in Compression 49212.2 Effect of Initial Perturbations 49712.2.1 Eigenfunction expansions 50012.3 Effect of Lateral Load (Beam-Columns) 50112.4 Indeterminate Problems 50512.5 Suppressing Low-Order Modes 50612.6 Beams on Elastic Foundations 51012.6.1 Axisymmetric buckling of cylindrical shells 51212.6.2 Whirling of shafts 51312.7 Energy Methods 51812.7.1 Energy methods in beam problems 51912.7.2 The uniform beam in compression 52012.7.3 Inhomogeneous problems 52312.8 Quick Estimates for the Buckling Force 52412.9 Summary 526 Further Reading 526 Problems 527 Appendix A The Finite Element Method 537A.1 Approximation 538A.1.1 The "best" approximation 538A.1.2 Choice of weight functions 539A.1.3 Discrete approximations 541A.2 Axial Loading 545A.2.1 The structural mechanics approach 545A.2.2 Assembly of the global stiffness matrix 547A.2.3 The nodal forces 548A.2.4 The Rayleigh-Ritz approach 549A.2.5 Direct evaluation of the matrix equation 554A.3 Solution of Differential Equations 556A.4 Finite Element Solutions for the Bending of Beams 558A.4.1 Nodal forces and moments 562A.5 Two- and Three-Dimensional Problems 565A.6 Computational Considerations 566A.6.1 Data storage considerations 568A.7 Use of the Finite Element Method in Design 568A.8 Summary 569 Further Reading 570 Problems 570 Appendix B Properties of Areas 577 Appendix C Stress Concentration Factors 581 Appendix D Answers to Even-Numbered Problems 585
