

<<计算力学摘要集>>

图书基本信息

书名：<<计算力学摘要集>>

13位ISBN编号：9787302093428

10位ISBN编号：7302093423

出版时间：2004-8

出版时间：清华大学出版社

作者：姚振汉

页数：554

字数：892000

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<计算力学摘要集>>

内容概要

The impact of Computational Mechanics on engineering and technological progress started in early 60^s of the last century and continued to flourish during the entire 20th Century. From the latter part of the 20th Century and the beginning of the 21st Century till now ,it also had an impressive influence on the mathematical ,physical and biological sciences.The extensive research being carried out around the world in applying the concepts of computational mechanics to multi-physical,multi-scale problems,nano and micro mechanical simulations and biomechanics ,is a testament to this.

<<计算力学摘要集>>

书籍目录

1 Accuracy gains from exponential discretization of the diffusion-convection equation
2 Derivation of modified stress-strain tensor for wrinkled membrane by using projection matrix
3 The Arlequin method as a multiscale numerical tool
4 An algebraic method for numerical stabilization of transport equation
5 Symplectic modeling of penetration in porous soils using arbitrary Lagrangian-Eulerian finite element method
7 Artificial dissipation for strictly stable finite volume methods on unstructured meshes
8 Goal oriented recovery with fundamental solutions
9 Some applications of stress functions and their dual theory in finite elements
10 Symplectic solutions and computational method of transversely isotropic elastic cylinders
11 Reinterpretation and simplified implementation of a discontinuous Galerkin method for Hamilton-Jacobi equations
12 Discontinuous Galerkin methods with mesh adaptivity
13 Performance of a geometric and an algebraic multilevel preconditioner for transport/reaction systems
14 Computational model validation under uncertainty
15 Reliable and efficient numerical modeling of elastic wave propagation in engineering structures by discontinuous Galerkin FEM
16 Numerical model of brick structures using the rigid bodies and spring model
17 The method of precise integration of elliptic functions
18 A mixed finite element method for a thermally nonlinear coupled problem.....
