

<<计算机图形学>>

图书基本信息

书名：<<计算机图形学>>

13位ISBN编号：9787302274872

10位ISBN编号：7302274878

出版时间：2012-1

出版时间：清华大学出版社

作者：（印）穆克赫尔吉，（印）贾纳 著

页数：583

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<计算机图形学>>

内容概要

《计算机图形学：算法与实现(英文影印版)》是在多年的教学经验基础上，从方便读者接受和理解的角度来编写的，每章先以浅显的语言介绍计算机图形学的算法，然后以丰富的示例阐述计算机图形学基本算法的C++语言实现，这不仅增加了本书趣味性，而且还使本书非常具有实用性，很多计算机图形学的算法实现代码，读者可以直接应用到自己的编程中，真正做到计算机图形学的算法与实现完美结合，非常适合作为“计算机图形学”课程的教材。

书籍目录

- preface xi
- 1 introduction to windows programming
 - 1.1 prologue
 - 1.2 windows operating system--the universal graphical user interface
 - 1.3 windows os----intepnals
 - 1.4 windows programming
 - 1.4.1 data type notation
 - 1.4.2 predefined constants
 - 1.4.3 windows programming architecture
 - 1.4.4 creating project in visual studio
 - 1.4.5 other ide and compiler options
 - 1.4.6 message-driven programming
 - 1.5 first windows program
 - 1.5.1 implementation
 - 1.5.2 program description
 - 1.6 typing characters in window
 - 1.6.1 implementation
 - 1.6.2 program description
 - 1.7 my first menu
 - 1.7.1 implementation
 - 1.7.2 program description
 - 1.8 summary
 - 1.9 review questions and exercises
- 2 two-dimensional geometric transformations 33--
 - 2.1 prologue
 - 2.2 tp. anslation
 - 2.2.1 implementation
 - 2.2.2 program description
 - 2.3 reflection
 - 2.3.1 implementation
 - 2.3.2 program description
 - 2.4 rotation
 - 2.4.1 implementation
 - 2.4.2 program description
 - 2.5 scaling
 - 2.5.1 implementation
 - 2.5.2 program description
 - 2.6 zooming
 - 2.6.1 implementation
 - 2.6.2 program description
 - 2.7 rubber banding
 - 2.7.1 implementation
 - 2.7.2 program description
 - 2.8 summary

<<计算机图形学>>

- 2.9 review questions and exercises
- 3 line drawing algorithms
 - 3.1 prologue
 - 3.2 scm conversion algorithm: a simple line drawing algorithm
 - 3.3 bresenham's scm conversion algorithm
 - 3.3.1 implementation
 - 3.3.2 program description
 - 3.4 bar chart
 - 3.4.1 implementation
 - 3.4.2 program description
 - 3.5 summary
 - 3.6 review questions and exercises
- 4 circle drawing algorithms
 - 4.1 prologue
 - 4.2 bresenham's circle drawing algorithmm
 - 4.2.1 implementation
 - 4.2.2 program description
 - 4.3 bresenham's ellipse drawing algorithm
 - 4.3.1 implementation
 - 4.3.2 program description
 - 4.4 arc
 - 4.4.1 implementation
 - 4.4.2 program description
 - 4.5 pie chart
 - 4.5.1 implementation
 - 4.5.2 program description
 - 4.6 projected pie implementation
 - 4.6.1 program description
 - 4.7 summary
 - 4.8 review questions and exercises
- 5 drawing curves
 - 5.1 prologue
 - 5.2 b-spline curve
 - 5.2.1 implementation
 - 5.2.2 program description
 - 5.3 bezier curve
 - 5.3.1 implementation
 - 5.3.2 program description
 - 5.4 summary
 - 5.5 review questions arm exercises
- 6 filling algorithms
 - 6.1 prologue
 - 6.2 seed fill algorithm
 - 6.2.1 implementation
 - 6.2.2 program description
 - 6.3 scan line polygon fill algorithm
 - 6.3.1 implementation

<<计算机图形学>>

- 6.3.2 program description
- 6.4 summary
- 6.5 review questions and exercises
- 7 clipping algorithms
- 7.1 prologue
- 7.2 viewport clipping
- 7.2.1 implementation
- 7.2.2 program description
- 7.3 mn)point subdivision line clipping
- 7.3.1 implementation
- 7.3.2 program description
- 7.4 sutherland-cohen line clipping
- 7.4.1 implementation
- 7.4.2 program description
- 7.5 summary
- 7.6 review questions ant) exercises
- 8 three-dimensional graphics
- 8.1 prologue
- 8.2 3d coordinate system
- 8.3 displaying 3d objects
- 8.4 3d transformations
- 8.4.1 3d translation
- 8.4.2 3d rotation
- 8.4.3 3d scaling
- 8.5 3d object to 2d image projection
- 8.5.1 worm coordinate to 3d viewpoint-based coordinate transformation
- 8.5.2 viewpoint-based coordinate system to 2d image transformation
- 8.6 displaying cube in 2d screen
- 8.6.1 implementation
- 8.6.2 program description
- 8.7 displaying sphere in 2d screen
- 8.7.1 implementation
- 8.7.2 program description
- 8.8 viewing transformations
- 8.9 implementation of other geometric shapes
- 8.9.1 implementation
- 8.9.2 program description
- 8.10 summary
- 8.11 review questions and exercises
- 9 hidden surface removal
- 9.1 prologue
- 9.2 z-buffer
- 9.3 z-buffer algorithm for cube
- 9.3.1 implementation
- 9.3.2 program description

<<计算机图形学>>

- 9.4 z-buffer algorithm for sphere
 - 9.4.1 implementation
 - 9.4.2 program description
- 9.5 ray tracing
- 9.6 ray tracing algorithm for cube
 - 9.6.1 implementation
 - 9.6.2 program description
- 9.7 ray tracing algorithm for sphere
 - 9.7.1 implementation
 - 9.7.2 program description
- 9.8 summary
- 9.9 review questions and exercises
- 10 illumination and shading
 - 10.1 prologue
 - 10.2 illumination
 - 10.3 modelling a shiny surface
 - 10.3.1 phong illumination model
 - 10.4 phong illumination for cube
 - 10.4.1 implementation
 - 10.5 phong illumination for sphere
 - 10.5.1 implementation
 - 10.5.2 program description
 - 10.6 summary
 - 10.7 review questions and exercises
- suggested further reading
- index

章节摘录

版权页：插图：After installation, the Dev-C++ IDE opens with menu and tool bars, project/file editing area, compile/tool status area (from top to bottom) . The menu or tool bar as well as the options with short helps for project creation, adding files to project, opening, closing, and editing files, along with compilation, build project, run options are easy to use and self-explanatory. To start a new project, the user has to select File-New Project from the main menu. This will close any previously opened projects, and will display the New Project dialog box. To have Win32 projects, you have to choose Windows-Application and name the project, for example, say, "winproj1" and click on OK. A Save Dialog box will be displayed. The location of the project file needs to be chosen. Dev-C++ will automatically create a default main.cpp file. You can simply save this file as WMain.cpp. To run the program, you have to choose Compile and then Run option. Keyboard shortcuts are also available. To test whether your IDE as well as compilation environment both are set up correctly, you try to run a sample test Windows application. Once you see the Windows application running, the IDE as well as the compiler both are working and ready to use. You can start new project or can add files as needed.
