<<信息时代的计算机科学理论>>

图书基本信息

书名：<<信息时代的计算机科学理论>>

13位ISBN编号：9787313096098

10位ISBN编号：7313096097

出版时间：2013-5

出版时间：上海交通大学出版社

作者：John Hopcroft,Ravindran Kannan

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

作者简介

John Hopcroft为图灵奖获得者。

Ravindran Kannan is a principal researcher with Microsoft Research Labs located in India

<<信息时代的计算机科学理论>>

书籍目录

Contents

1 Introduction 6
2 High-Dimensional Space 7
2.1 Properties of High-Dimensional Space 9
2.2 The High-Dimensional Sphere 10
2.2.1 The Sphere and the Cube in Higher Dimensions 10
2.2.2 Volume and Surface Area of the Unit Sphere 11
2.2.3 The Volume is Near the Equator 14
2.2.4 The Volume is in a Narrow Annulus 16
2.2.5 The Surface Area is Near the Equator 16
2.3 The High-Dimensional Cube and Chernoff Bounds 18
2.4 Volumes of Other Solids 23
2.5 Generating Points Uniformly at Random on the surface of a Sphere 24
2.6 Gaussians in High Dimension 25
2.7 Random Projection and the Johnson-Lindenstrauss Theorem 31
2.8 Bibliographic Notes 34
2.9 Exercises 35
3 Random Graphs 46
3.1 The G(n; p) Model 46
3.1.1 Degree Distribution 46
3.1.2 Existence of Triangles in G(n; d=n) 51
3.1.3 Phase Transitions 52
3.1.4 Phase Transitions for Monotone Properties 62
3.1.5 Phase Transitions for CNF-sat 65
3.1.6 The Emerging Graph 69
3.1.7 The Giant Component 72
3.2 Branching Processes 80
3.3 Nonuniform and Growth Models of Random Graphs 85
3.3.1 Nonuniform Models 85
3.3.2 Giant Component in Random Graphs with Given Degree Distribution 86
3.4 Growth Models 87
3.4.1 Growth Model Without Preferential Attachment 87
3.4.2 A Growth Model With Preferential Attachment 94
3.5 Small World Graphs 95
3.6 Bibliographic Notes 100
3.7 Exercises 101
4 Singular Value Decomposition (SVD) 110
4.1 Singular Vectors 111
4.2 Singular Value Decomposition (SVD) 115
4.3 Best Rank k Approximations 116
1
4.4 Power Method for Computing the Singular Value Decomposition 118
4.5 Applications of Singular Value Decomposition 122
4.5.1 Principal Component Analysis 122
4.5.2 Clustering a Mixture of Spherical Gaussians 123

第一图书网, tushu007.com

4.5.3 An Application of SVD to a Discrete Optimization Problem 127
4.5.4 SVD as a Compression Algorithm 130
4.5.5 Spectral Decomposition 130
4.5.6 Singular Vectors and ranking documents 131
4.6 Bibliographic Notes 133
4.7 Exercises 134
5 Markov Chains 142
5.1 Stationary Distribution 143
5.2 Electrical Networks and Random Walks 144
5.3 Random Walks on Undirected Graphs 148
5.4 Random Walks in Euclidean Space 155
5.5 Random Walks on Directed Graphs 158
5.6 Finite Markov Processes 158
5.7 Markov Chain Monte Carlo 163
5.7.1 Time Reversibility 164
5.7.2 Metropolis-Hasting Algorithm 165
5.7.3 Gibbs Sampling 166
5.8 Convergence to Steady State 167
5.8.1 Using Minimum Escape Probability to Prove Convergence 173
5.9 Bibliographic Notes 175
5.10 Exercises 176
6 Learning and VC-dimension 183
6.1 Learning 183
6.2 Linear Separators, the Perceptron Algorithm, and Margins 184
6.3 Nonlinear Separators, Support Vector Machines, and Kernels 189
6.4 Strong and Weak Learning - Boosting 194
6.5 Number of Examples Needed for Prediction: VC-Dimension 196
6.6 Vapnik-Chervonenkis or VC-Dimension 199
6.6.1 Examples of Set Systems and Their VC-Dimension 199
6.6.2 The Shatter Function 202
6.6.3 Shatter Function for Set Systems of Bounded VC-Dimension . . . 204
6.6.4 Intersection Systems 205
6.7 The VC Theorem 206
6.8 Priors and Bayesian Learning 209
6.9 Bibliographic Notes 210
6.10 Exercises 211
2
7 Algorithms for Massive Data Problems 217
7.1 Frequency Moments of Data Streams 217
7.1.1 Number of Distinct Elements in a Data Stream 218
7.1.2 Counting the Number of Occurrences of a Given Element. 221
7.1.3 Counting Frequent Elements 222
7.1.4 The Second Moment 224
7.2 Sketch of a Large Matrix 227
7.2.1 Matrix Multiplication Using Sampling 229
7.2.2 Approximating a Matrix with a Sample of Rows and Columns . . . 231
7.3 Sketches of Documents 233

第一图书网, tushu007.com

7.4 Exercises 236
8 Clustering 240
8.1 Some Clustering Examples 240
8.2 A Simple Greedy Algorithm for k-clustering 242
8.3 Lloyd's Algorithm for k-means Clustering 243
8.4 Meaningful Clustering via Singular Value Decomposition 245
8.5 Recursive Clustering based on Sparse Cuts 250
8.6 Kernel Methods 254
8.7 Agglomerative Clustering 256
8.8 Communities, Dense Submatrices 258
8.9 Flow Methods 260
8.10 Linear Programming Formulation 263
8.11 Finding a Local Cluster Without Examining the Whole graph 264
8.12 Statistical Clustering 270
8.13 Axioms for Clustering 270
8.13.1 An Impossibility Result 270
8.13.2 A Satisfiable Set of Axioms 276
8.14 Exercises 278
9 Graphical Models and Belief Propagation 283
9.1 Bayesian Networks 283
9.2 Markov Random Fields 284
9.3 Factor Graphs 286
9.4 Tree Algorithms 286
9.5 Message Passing Algorithm 287
9.6 Graphs with a Single Cycle 290
9.7 Belief Update in Networks with a Single Loop 292
9.8 Graphs with Multiple Loops 293
9.9 Clustering by Message Passing 294
9.10 Maximum Weight Matching 296
9.11 Warning Propagation 300
9.12 Correlation Between Variables 301
3
9.13 Exercises 305
10 Other Topics 307
10.1 Rankings 307
10.2 Hare System for Voting 309
10.3 Compressed Sensing and Sparse Vectors 310
10.3.1 Unique Reconstruction of a Sparse Vector 311
10.3.2 The Exact Reconstruction Property 313
10.3.3 Restricted Isometry Property 314
10.4 Applications 316
10.4.1 Sparse Vector in Some Coordinate Basis 316
10.4.2 A Representation Cannot be Sparse in Both Time and Frequency Domains 316
10.4.3 Biological 319
10.4.4 Finding Overlapping Cliques or Communities 320
10.4.5 Low Rank Matrices 321

第一图书网, tushu007.com

10.5 Exercises 322
11 Appendix 325
11.1 Asymptotic Notation 325
11.2 Useful Inequalities 326
11.3 Sums of Series 333
11.4 Probability 337
11.4.1 Sample Space, Events, Independence 338
11.4.2 Variance 340
11.4.3 Covariance 341
11.4.4 Variance of Sum of Independent Random Variables 341
11.4.5 Sum of independent random variables, Central Limit Theorem . . . 341
11.4.6 Median 342
11.4.7 Unbiased estimators 342
11.4.8 Probability Distributions 344
11.4.9 Tail Bounds 353
11.4.10 Chernf Bounds: Bounding of Large Deviations 354
11.4.11Holding's Inequality 358
11.5 Generating Functions 359
11.5.1 Generating Functions for Sequences Depened by Recurrence Relationships
. 361
11.5.2 Exponential Generating Function 363
11.6 Eigenvalues and Eigenvectors 369
11.6.1 Eigenvalues and Eigenvectors 369
11.6.2 Symmetric Matrices 370
11.6.3 Extremal Properties of Eigenvalues 372
11.6.4 Eigenvalues of the Sum of Two Symmetric Matrices 374
4
11.6.5 Separator Theorem 375
11.6.6 Norms 375
11.6.7 Important Norms and Their Properties 377
11.6.8 Linear Algebra 380
11.7 Miscellaneous 386
11.7.1 Variational Methods 388
11.7.2 Hash Functions 389
11.7.3 Sperner's Lemma 390
Index 391
5
