<<生态安全学导论>>

内容概要

Along with the continuous development of world multi-polarity trend , further deepening of economic globalization , burgeoning of regional cooperation , ever closer and frequent inter-state exchange , constant upgrade of science , technology and productivity , peace , development and cooperation have become an irreversible world trend and the current of our times. Meanwhile , the hot spots in some areas flaring up unexpectedly , widening the gap between the South and North and overall economic imbalance have become the focus of world people's concern. In response to an international community full of opportunities and challenges , all the countries should strengthen their mutual trust , coordination , further exchanges and cooperation and work hard for the world peace and common prosperity.

书籍目录

- Chapter Basic Philosophy of Ecological Safety
- Section Natural Ecological Safety Section Ecological System Safety
- Section Human Ecological Safety
- Chapter Formation and Development of Ecological Civilization
- Section Succession of Human Civilization
- Section Transformation from Industrial Civilization to Ecological Civilization
- Section Improvement of Technology and Ecological Crisis
- Section Technology and Ecological Values of Science
- Chapter Non-Traditional Security
- Section Disasters and Conflicts
- Section Homeland Security
- Section Labor Security Section Foodstuffs Security
- Section Food Security
- Section Threat of Terrorism
- Chapter Environmental Security
- Section Climate Change
- Section Land Desertification
- Section Water Resources Pollution
- Section Offshore Pollution
- Section Air Pollution
- Section Waste Pollution
- Chapter Species Security
- Section Animals, Plants and Microorganisms
- Section Species Extinction
- Section Destruction of Forest Vegetation
- Section Alien Species Invasion
- Section Protection of Biodiversity
- Chapter Life Security
- Section Population Security
- Section Poverty Elimination
- Section Epidemic Infectious Diseases Section Drug Abusing
- Chapter Safety of Natural Heritage
- Section Safety of Natural Heritage Section World Geoparks
- Chapter Nuclear Safety and Radiation
- Section Nuclear Safety
- Section Radiation
- Section Biochemical Weapons
- Chapter Urban Safety
- Section Urban Safety System Section Urban Disaster Warning
- Section Urban Safety Management
- Chapter Resources Safety
- Section Natural Resources Safety
- Section Water Resources Safety
- Section Energy Safety

<<生态安全学导论>>

Section Mineral Resources Safety
Chapter Sustainable Development
Section Sustainable Development of Economy
Section Sustainable Development of Ecology
Section Sustainable Development of Society
Section Sustainable Urban Development
Bibliography

章节摘录

版权页： His masterpiece-*Small is Beautiful*, is a book on development economics that has an extensive effect since the 1970s (1973). Schumacher firstly put forward the concept of intermediate technology, and then appropriate technology. From the ecological perspective, he experienced and observed the polarization between urban and rural areas, the poor and the rich, the industrial life and village life, as well as the wide gap between the rich countries and the poor countries, the Eastern countries and Western countries. His idea about intermediate technology is proposed considering both economic growth and the livelihood of the poor. His human scale-based value principle has penetrated into the economic life of both the developing and developed countries, and his idea of intermediate technology has extended into an industrial development mode, an alternative mode of ownership, a substitutional resource and an educational theory of environment and development. In 1980 and 1984, the New Economics Society met twice in London and Bonn and determined to set up a new economics - Economics of Survival (1986) with an aim to seek the best approach to attain individual development and social justice, satisfy various human needs, and realize the sustainable utilization of resources and environmental protection. They carried forward and developed the Schumacher's viewpoints on ecological economy, integrated the "human scale" and "natural scale" in economic development and turned to be a "sound, humane and ecological" new economics. Compared with the traditional economics, the "Economics of Survival" is also aimed to promote economic development, the only difference is that it stresses "another kind of development", which shall be firstly oriented to demand (material and nonmaterial demands of human beings).

Ecology Is The State Of Living; While Ecological Safety Is The Safety Of Living.It Is The Moving Process For The Environment Upon Which The Life System Exist (Air , Soil , Forests , Seas And Oceans , Wetlands , Water Etc.) Not To Be Damaged Or Threatened. Plants , Animals And Microorganisms Form The System Of Life On The Earth. “ Ecological Environment ” Which We Usually Mention Is Actually Made Up Of Two Concepts , In Which “ Ecology ” Means Organism And “ Environment ” Means The Space Where The Organisms Inhabit.These Two Are Inter-Related , But Cannot Be Confused With Each Other. “ Ecological Safety ” We Advocate Today Refers To The Safety Of All Livings.A Local War Takes A Long Diplomatic Process , While An Ecological Disaster Is Sudden , Harming The Mankind And All The Other Livings As Well.

Preserving Ecological Safety , Protecting The Natural Environment And Realize Sustainable Development Should Be Taken As Our Biggest Achievement As Well As Our Grandest Charity In The Current World.Let'S Join Hands To Save Our Common Home——The Planet. ——Dr.Jiang Mingjun
