## <<中国图书馆学报年刊>>

### 内容概要

本书是《中国图书馆学报年刊(2010)》(英文版), 收录了《中国图书馆学报》2010年所刊发文章中的精品, 反映了这一阶段图书馆学研究的现状和热点。

本书适合从事图书馆学研究人员和图书馆馆员阅读。

书籍目录

Research Papers

Public library land use and construction standards: Nature, effect and characteristics

LI Guoxin

Explications of the main standards for public library land use and construction

FENG Shouren

Non-governmental private libraries: Current situation and prospects for the future

WANG Zizhou & WU Hanhua

Jiaying Mode and its significance for the public library service system in China

LI Chaoping

Medical information service after earthquake in Wenchuan of China and its enlightenments

ZHAN Youxiang, HAO Junqin, CHENG Jin, CHEN Rui LUO

Rongqing & HE Wei

The state & demand of library science education in mainland China: 2003-2008

PAN Yantao & LIN Mengxiao

Recommendations on the organization of libraries' physical information resources

WANG Songlin

Factor analysis of automatic multi-level classification based on Chinese Library Classification

HE Lin, LIU Jing & HOU Hanqing

Visualization of Chinese Library Classification

JING Peidong

Web citations inaccessibility and its solutions

LU Wei, HAN Shuguang & ZHANG Xiaojuan

Study on theoretical principles of noninteractive literature-based discovery

ZHANG Yunqiu & LENG Fuhai

Empirical research on noninteractive literature-based knowledge discovery of Chinese social sciences literature: A case study of agricultural economics literature

HUANG Shuiqing & MA Junling

Reviews

Advances in scholarly research of library science in China in 2009

WU Weici, GU Xiujie & Tommy Yeung

An analysis of researches on rural libraries published in China from 1978 to 2007

HUANG Tiyang, GAN Youqing & YANG Yong

Discussion Papers

Survival is not mandatory

Frederick Wilfred Lancaster

License to read ?

--IFLA's role in advocacy for building a global  
library

Harald von Hielmcrone

A chronicle of events of Chinese library community in 2009

## 章节摘录

版权页：插图：This feature in Construction Standards serves as a basic standard for total construction area control and is considered an important achievement of the Construction Standards. The key of public library construction scale control is the construction area control. How should the construction area be determined according to the classification system based on the number of served population? A series of basic standards for construction area measurement and calculation in accordance with the classification system based on the number of served population should be established. After extensive research in the reality of Chinese public libraries at all levels, comparison with international practices and massive data analysis, for the first time the basic standards for public library construction area control for the next 5 to 10 years are proposed in China. For example, it is put forward that there should be 0.6 to 1.5 books in public libraries for every Chinese, 0.3 to 2 seats in public library for every 1000 Chinese (Article XX). At the same time, the following is proposed: the storage of number of books every square meter, the area every reader seat occupies and calculation indicator for area in use (Provision XX). Among the above mentioned standards, a couple of standards have separately appeared in previous governmental regulations, however, it is the first time that they are all systematically included in one governmental regulation. The formation of the standard system not only specifies the rule of determining the construction scale based on the number of served population, but also provides practical guidance and regulations for the key of public library construction scale control and construction area control. It also has significant meaning for the goal of future public library service, evaluation and development.
