章节摘录

版权页：插图：The pick-your-own orchard is usually open from mid-April to November. In an orchard, you can take a stroll, breathing the fresh air, and enjoying quality time with your family and friends. The fun starts in spring as varieties of fruit trees blossom. Stretches of white and pink blossoms, to which is drawn an analogy with snow, send forth a delicate scent<sup>3</sup>. Visiting orchards for the blossoms is a really rewarding experience——an appreciation of one of the most beautiful times of the year! Then as summer fades, the picking season comes. Visitors can pick berries like strawberries or cherries which mature earliest. When autumn——the fruitful time of the year hits full swing in October, the orchard hits its peak with more fruit<sup>4</sup> than you can imagine. Going to the orchard to pick the fruit personally or buy fresh fruit just picked by the farmers is a good choice for you as you can spend your weekend returning to nature. The fruit produced in these orchards is coo-fruit, a term which is an assurance that you are buying quality fruit whose growing practices are sensitive and respectful to the environments. The farmers use a combination of old farming methods and leading- edge technologies to grow fruit that preserve the balance of the ecology of the orchard, and focus upon the use of natural methods and minimal spray<sup>6</sup>. These growing and spray methods may cost more than standard practices, but it's worth the effort and money. You' 11 agree once you have a taste of the fruit.
