

<<用个人计算机做物理实验>>

图书基本信息

书名：<<用个人计算机做物理实验>>

13位ISBN编号：9787506236225

10位ISBN编号：7506236222

出版时间：1998-3

出版单位：北京世界图书出版公司

作者：Ed.

页数：312

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<用个人计算机做物理实验>>

内容概要

In many fields of physics the use of on-line computers in research experiments is daily routine and without computers scientific progress is often unthinkable in our times .Computer-aided experimentation and measurement have become important aspects in professional life in research as well as in industry. Nevertheless these subjects are not really covered in the physics curricula of most universities and we believe it to be an important task for professors and teaching staff to familiarize students with computer applications in their own and neighbouring fields. In general it is desirable that students also learn some of the useful concepts of the new science called "informatics" or "computer science". Successful attempts have already been made in the field of computer applications in theoretical physics and various universities now offer elaborate courses; excellent textbooks are also available.

书籍目录

Part 1 Mechanics 1 Fourier Analysis of Some Simple Periodic Signals 1.1 Apparatus 1.2 Programs 1.3 Experiments 1.3.1 Simple Harmonic Wave 1.3.2 Beats 1.3.3 Amplitude Modulation 1.3.4 Rectangles 1.4 Didactic and Pedagogical Aspects References Appendix I.A 2 Point Mechanics by Experiments -Direct Access to Motion Data 2.1 Introduction 2.2 ORVICO 2.2.1 Principle 2.2.2 Hardware 2.2.3 Software 2.3 Examples 2.3.1 Ballistic Motion 2.3.2 The Rigid Pendulum 2.3.3 Frame of Reference 2.3.4 Statistical Motion on an Air Table 2.3.5 Spheric Pendulum 2.3.6 Two Point Masses Observed 2.4 Conclusion ReferencesPart Thermodynamics 3.Application of PID Control to a Thermal Evaporation Source 3.1 Introduction 3.2 The System to be Controlled:An Inert-Gas-Aggregation Source 3.2.1 Background 3.2.2 The Inert-Gas-Aggregation Technique 3.2.3 A Description of a Real Inert-Gas-Aggregation Source 3.3 Description of the PID Control Algorithm 3.3.1 The PID Control Algorithm 3.4 Implementing the PID Algorithm on a Computer 3.4.1 Program Structure and the Use of Interrupts 3.5 Adjusting the PID 3.5.1 The Ziegler-Nichols' Methods 3.6 Possibilities Offered by the Leman Source 3.7 Conclusions Acknowledgements References 4.Computer Control of the Measurement of Thermal Conductivity 4.1 Thermal Conductivity 4.1.1 Measurement of Thermal Conductivity with Parallel Heat Flow 4.1.2 Measurement of Thermal Conductivity with Non-Parallel Heat Flow 4.2 Experimental Considerations 4.2.1 The Thermocouple as a Temperature Measuring Device 4.2.2. The AD595 Thermocouple Amplifier Integrated Circuit 4.2.3 Thermocouple Accuracy 4.2.4 Calibration of the Thermocouples 4.2.5 Thermocouple Selection Multiplexing Circuit 4.2.6 Multiplexor Control 4.2.7 The IEEE-488 Bus Interface Unit 4.2.8 The Control and Measurement Software 4.2.9 Discussion of the Experiment 4.3 The Computer Simulation References Appendix 4.A. Appendix 4.BPart Solid State Physics 5.Experiments with High-Tc Superconductivity 5.1 Experimental Setup 5.1.1 The Apparatus 5.1.2 Electronics 5.1.3 Computer, Interface and Software 5.2 Measurements 5.2.1 Resistance Measurement 5.2.2 Tunnel Diode Oscillator Measurement 5.3 Results 5.3.1 Detailed Analysis of the Resistance and TDO Measurements 5.3.2 Thermodynamic and Calorimetric Results 5.3.3 Experience Within the Laboratory Course References Appendix 5.A: Electric Circuit Diagrams Appendix 5.B: Spline Fit Program SPLFIT 6.Computer Control of Low Temperature Specific Heat Measurement 6.1 Basic Physics 6.1.1 Specific Heat 6.1.2 Low Temperature Specific Heat 6.1.3 The Debye Model for the Specific Heat 6.1.4 Specific Heat Anomalies 6.2 Experimental Setup 6.2.1 Specimen 6.2.2 Apparatus 6.2.3 Electronics 6.2.4 Microcomputer Control 6.3 Measurements and Results 6.3.1 Measurement Principles 6.3.2 Using the Computer Program 6.3.3 Typical Results 6.4 Discussion References Appendix 6.A: Circuit Diagrams Appendix 6.B: Program Listing 7. Computer-Controlled Observations of Surface Plasmon-Polaritons 7.1 Introduction 7.2 A Computer-Controlled ATR Experiment 7.2.1 Prism Geometry 7.2.2 Computer Control of ATR Measurements 7.3 Comments on the Mechanics Design and the Computer Interface 7.4 Conclusion ReferencesPart IV Optics and Atomic Physics 8. Molecular Spectroscopy of 12 9. Optical Transfer FunctionsPart V Nuclear Physics 10. Nuclear Spectrometry Using a PC Converted to a Multichannel Analyser 11. Parity Violation in the Weak Interaction 12. Receiving and Interpreting Orbital Satellite Data.A Computer Experiment for Educational PurposesSubject Index
