

<<偏微分方程（第一卷）>>

图书基本信息

书名：<<偏微分方程（第一卷）>>

13位ISBN编号：9787506242523

10位ISBN编号：7506242524

出版时间：1999-6

出版时间：世界图书出版公司

作者：M.E.Taylor

页数：561

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<偏微分方程（第一卷）>>

内容概要

Partial differential equations is a many-faceted subject. Created to describe the mechanical behavior of objects such as vibrating strings and blowing winds, it has developed into a body of material that interacts with many branches of mathematics, such as differential geometry, complex analysis, and harmonic analysis, as well as a ubiquitous factor in the description and elucidation of problems in mathematical physics. 此书为英文版！

书籍目录

Contents of Volumes and Introduction 1 Basic Theory of ODE and Vector Fields Introduction 1 The derivative 2 Fundamental local existence theorem for ODE 3 Inverse function and implicit function theorems 4 Constant-coefficient linear systems ; exponentiation of matrices 5 Variable-coefficient linear systems of ODE: Duhamel ' s principle 6 Dependence of solutions on initial data and on other parameters 7 Flows and vector fields 8 Lie brackets 9 Commuting flows ; Frobenius ' s theorem 10 Hamiltonian systems 11 Geodesics 12 Variational problems and the stationary action principle 13 Differential forms 14 The symplectic form and canonical transformations 15 First-order , scalar , nonlinear PDE 16 Completely integrable Hamiltonian systems 17 Examples of integrable systems:central force problems 18 Relativistic motion 19 Topological applications of differential forms 20 Critical points and index of a vector field A ZNonsmooth vector fields References2 The Laplace Equation and Wave Equation Introduction 1 Vibrating strings and membranes 2 The divergence of a vector field 3 The covariant derivative and divergence of tensor fields 4 The Laplace operator on a Riemannian manifold 5 The wave equation on a product manifold and energy conservation 6 Uniqueness and finite propagation speed 7 Lorentz manifolds and stress-energy tensors 8 More general hyperbolic equations;energy estimates 9 The symbol of a differential operatorand a general Green-Stokes formula 10 The Hodge Laplacian on k-forms 11 Maxwells equations References3 Fourier Analysis,Distribution,and Constant-Coefficient Linear PDE Introduction 1 Fourier series 2 Harmonic functions and holomorphic functions in the plane 3 The Fourier transform 4 Distributions and tempered distributions 5 The classical evolution equations 6 Radial distributions,polar coordinates,and Bessel functions 7 The method of images and Poisson s summation formula 8 Homogeneous distributions and principal value distributions 9 Elliptic operators 10 Local solvability of constant-coefficient PDE 11 The discrete Fourier transform 12 The fast Fourier transform A The mighty Gaussian and the sublime gamma function References4 Sobolev Spaces Introduction 1 Sobolev spaces on  $\mathbb{R}^n$  2 The complex interpolation method 3 Sobolev spaces on compact manifolds 4 Sobolev spaces on bounded domains 5 The Sobolev spaces  $H^{s,p}$  6 The Schwartz kernel theorem References5 Linear Elliptic Equations Introduction .....6 Linear Evolution EquationsA Outline of Functional AnalysisB Manifolds,Vector Bundles,and Lie GroupsIndex
