

<<非线性纤维光学>>

图书基本信息

书名：<<非线性纤维光学>>

13位ISBN编号：9787506265638

10位ISBN编号：750626563X

出版时间：2005-4

出版时间：世界图书出版公司

作者：G.P.Agrawal

页数：466

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## <<非线性纤维光学>>

### 内容概要

Since the publication of the first edition of this book in 1989, the field of nonlinear fiber optics has virtually exploded. A major factor behind such a tremendous growth was the advent of fiber amplifiers, made by doping silica or fluoride fibers with rare-earth ions such as erbium and neodymium. Such amplifiers revolutionized the design of fiber-optic communication systems, including those making use of optical solitons whose very existence stems from the presence of nonlinear effects in optical fibers. Optical amplifiers permit propagation of lightwave signals over thousands of kilometers as they can compensate for all losses encountered by the signal in the optical domain. At the same time, fiber amplifiers enable the use of massive wavelength-division multiplexing (WDM) and have led to the development of lightwave systems with capacities exceeding 1 Tb/s. Nonlinear fiber optics plays an increasingly important role in the design of such high-capacity lightwave systems. In fact, an understanding of various nonlinear effects occurring inside optical fibers is almost a prerequisite for a lightwave-system designer. . The third edition is intended to bring the book up-to-date so that it remains a unique source of comprehensive coverage on the subject of nonlinear fiber optics. An attempt was made to include recent research results on all topics relevant to the field of nonlinear fiber optics. Such an ambitious objective increased the size of the book to the extent that it was necessary to split it into two separate books. This book will continue to deal with the fundamental aspects of nonlinear fiber optics. A second book Applications of Nonlinear Fiber Optics is devoted to its applications; it is referred to as Part B in this text. ...

## 书籍目录

Preface 1 Introduction 1.1 Historical Perspective 1.2 Fiber Characteristics 1.3 Fiber Nonlinearities 1.4  
 Overview Problems References 2 Pulse Propagation in Fibers 2.1 Maxwell ' s Equations 2.2 Fiber Modes 2.3  
 Pulse-Propagation Equation 2.4 Numerical Methods Problems References 3 Group-Velocity Dispersion 3.1  
 Different Propagation Regimes 3.2 Dispersion-Induced Pulse Broadening 3.3 Third-Order Dispersion 3.4  
 Dispersion Management Problems References 4 Self-Phase Modulation 4.1 SPM-Induced Spectral Broadening  
 4.2 Effect of Group-Velocity Dispersion 4.3 Higher-Order Nonlinear Effects Problems References 5 Optical  
 Solitons 5.1 Modulation Instability 5.2 Fiber Solitons 5.3 Other Types of Solitons 5.4 Perturbation of Solitons  
 5.5 Higher-Order Effects Problems References 6 Polarization Effects 6.1 Nonlinear Birefringence 6.2 Nonlinear  
 Phase Shift 6.3 Evolution of Polarization State 6.4 Vector Modulation Instability 6.5 Birefringence and Solitons  
 6.6 Random Birefringence Problems References 7 Cross-Phase Modulation 7.1 XPM-Induced Nonlinear  
 Coupling 7.2 XPM-Induced Modulation Instability 7.3 XPM-Paired Solitons 7.4 Spectral and Temporal Effects  
 7.5 Applications of XPM Problems References 8 Stimulated Raman Scattering 8.1 Basic Concepts 8.2  
 Quasi-Continuous SRS 8.3 SRS with Short Pump Pulses 8.4 Soliton Effects 8.5 Effect of Four-Wave Mixing  
 Problems References 9 Stimulated Brillouin Scattering 9.1 Basic Concepts 9.2 Quasi-CW SBS 9.3 Dynamic Aspects  
 9.4 Brillouin Fiber Lasers 9.5 SBS Applications Problems References 10 Parametric Processes 10.1 Origin of  
 Four-Wave Mixing 10.2 Theory of Four-Wave Mixing 10.3 Phase-Matching Techniques 10.4 Parametric  
 Amplification 10.5 FWM Applications 10.6 Second-Harmonic Generation Problems References Appendix A  
 Decibel Units Appendix B Nonlinear Refractive Index Appendix C Acronyms Index
