<<超弦理论 (第1卷)>>

内容概要

Recent years have brought a revival of work on string theory, which has been a source of fascination since its origins nearly twenty years ago. There seems to be a widely perceived need for a systematic, pedagogical exposition of the present state of knowledge about string theory. We hope that this book will help to meet this need. To give a comprehensive account of such a vast topic as string theory would scarcely be possible, even in two volumes with the length to which these have grown. Indeed, we have had to omit many important subjects, while treating others only sketchily. String field theory is omitted entirely (though the subject of chapter 11 is closely related to light-cone string field theory). Conformal field theory is not developed systematically, though much of the background material needed to understand recent papers on this subject is presented in chapter 3 and elsewhere.

书籍目录

Preface1 Introduction 1.1 The early days of dual models 1.1.1 The Veneziano amplitude and duality  
 1.1.2 High-energy behavior of the Veneziano model 1.1.3 Ramifications of the Veneziano model 1.2  
 Dual models of everything 1.2.1 Duality and the graviton 1.2.2 Unification in higher dimensions  
 1.2.3 Supersymmetry 1.3 String theory 1.3.1 The massless point particle 1.3.2 Generalization to  
 strings 1.3.3 Constraint equations 1.4 String interactions 1.4.1 Splitting of strings 1.4.2 Vertex  
 operators 1.4.3 Use of vertex operators 1.4.4 Evaluation of the scattering amplitude 1.4.5 The mass  
 of the graviton 1.5 Other aspects of string theory 1.5.1 Gravitational Ward identities 1.5.2 Open  
 strings 1.5.3 Internal symmetries of open strings 1.5.4 Recovery of the Veneziano amplitude 1.5.5  
 Comparison with QCD 1.5.6 Uparity and gravity 1.6 Conclusion2 Free bosonic strings 2.1 The  
 classical bosonic string 2.1.1 String action and its symmetries 2.1.2 The free string in Minkowski space  
 2.1.3 Classical covariant gauge fixing and field equations 2.2 Quantization - old covariant approach  
 2.2.1 Commutation relations and mode expansions 2.2.2 Virasoro algebra and physical states 2.2.3  
 Vertex operators 2.3 Light-cone gauge quantization 2.3.1 Light-cone gauge and Lorentz algebra 2.3.2  
 Construction of transverse physical states 2.3.3 The no-ghost theorem and the spectrum-generating algebra  
 2.3.4 Analysis of the spectrum 2.3.5 Asymptotic formulas for level densities 2.4 Summary3 Modern  
 covariant quantization 3.1 Covariant path-integral quantization 3.1.1 Faddeev-Popov ghosts 3.1.2  
 Complex world-sheet tensor calculus 3.1.3 Quantization of the ghosts 3.2.1 Construction of BRST charge  
 3.2.2 Covariant calculation of the Virasoro anomaly 3.2.3 Virasoro, conformal and gravitational  
 anomalies 3.2.4 Bosonization of ghost coordinates 3.3 Global aspects of the string world sheet 3.4  
 Strings in background fields 3.4.1 Introduction of a background space-time metric 3.4.2 Weyl  
 invariance 3.4.3 Conformal invariance and the equations of motion 3.4.4 String-theoretic corrections to  
 general relativity 3.4.5 Inclusion of other modes 3.4.6 The dilaton expectation value and the string  
 coupling constant 3.5 Summary4 World-sheet supersymmetry in string theory 4.1 The classical theory  
 4.1.1 Global world-sheet supersymmetry 4.1.2 Superspace 4.1.3 Constraint equations 4.1.4  
 Boundary conditions and mode expansions 4.2 Quantization - the old covariant approach 4.2.1  
 Commutation relations and mode expansions 4.2.2 Super-Virasoro algebra and physical states 4.2.3  
 Boson-emission vertex operators 4.3 Light-cone gauge quantization 4.3.1 The light-cone gauge 4.3.2  
 No-ghost theorem and the spectrum-generating algebra 4.3.3 The GSO conditions 4.3.4 Locally  
 supersymmetric form of the action 4.3.5 Superstring action and its symmetries 4.4 Modern covariant  
 quantization 4.4.1 Faddeev-Popov ghosts 4.4.2 BRST symmetry 4.4.3 Covariant computation of  
 the Virasoro anomaly 4.5 Extended world-sheet supersymmetry 4.5.1 The  $N = 2$  theory 4.5.2 The  $N$   
 $= 4$  theory 4.6 Summary 4.A Super Yang-Mills theories5 Space-time supersymmetry in string theory6  
 Nonabelian gauge symmetry7 Tree amplitudesBibliographyIndex
