

<<碾压混凝土坝新进展>>

图书基本信息

书名：<<碾压混凝土坝新进展>>

13位ISBN编号：9787508449944

10位ISBN编号：7508449940

出版时间：2007-10

出版时间：中国水利水电出版社

作者：贾金生

页数：898

字数：1765000

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## <<碾压混凝土坝新进展>>

### 内容概要

From the first experiences of Roller Compacted Concrete (RCC) dams began in 1978, there has been a high speed development of RCC technology applied in dam construction throughout the world for the important advantages of being more economical and more efficient. At the end of 2006 there were over 380 large ( $H > 15\text{m}$ ) RCC dams either completed or under construction throughout the World. The first RCC dam over 200m in height (Longtan in China) is about to be completed followed by another two or three of the similar height recently. There is now enough confidence in well- designed RCC dams of 200m high, which can help to achieve an adequate balance between safety, economy and environmental protection.

## &lt;&lt;碾压混凝土坝新进展&gt;&gt;

## 书籍目录

Table of Contents  
 Preface  
 Lectures  
 Measures for the Termination of the History of "No Concrete Dam Without Cracking"  
 Overview of RCC Dams at the End of 2006  
 RCC Dams in Spain  
 A High RCC Dam with Low Grade Aggregates  
 The Technology Development of RCC Dam Construction in China  
 Effect of Foundation Condition on Static and Dynamic Behaviour of Proposed Nam Theun 1 RCC Arch-gravity Dam in Laos  
 A New Model for the Behaviour of Roller Compacted Concrete in Dams under Early Thermal Loading  
 Detail Design and Construction Considerations in Jegin RCC Dam  
 Distributed Fibre Optic Temperature Measurements - a Competitive Alternative for Temperature Monitoring in Large RCC Dams  
 Safety of RCC Gravity Dams over 200 m Considering Hydraulic Fracturing  
 Theme 1: New Trends  
 Key Technology for Temperature Control and Anti-crack for Longtan RCC Dam  
 Grouting Temperature and Thermal Load of RCC Arch Dam  
 Scenario of RCC Dams in Pakistan,  
 Selection of RCC Dam for Bunji Hydropower Project (a Case Study)  
 An Overview of the Development of the Yeywa Hydropower Project, Myanmar  
 RCC Field Water Pressure Test and Permeability Research  
 Design Concepts of Formwork for RCC Dams  
 A Fragility Curve Model for RCC Gravity Dams  
 The RCC Double-curvature Arch Dam of Linhekou Hydropower Project  
 Taishir RCC Dam in Mongolia  
 RCC Dams - Inclined Internal Drain Holes  
 Simulation Design and New Structure of RCC Arch Dam  
 New Alternative Method for Bonding RCC Layers  
 Study on High-intensity RCC and Aggregate Production Workmanship for Longtan Dam  
 Zirdan RCC Dam, Lessons Learned  
 Comparative Analysis of the Results of the Laboratory/Field Shear Strength Tests of Longtan RCC  
 Application of MgO Content to RCC Arch Dam  
 Theme 2: Planning and Design  
 A General Face of Study on Key Techniques for the Design of Longtan High RCC Dam  
 Design Consideration of Badovli RCC Dam  
 Temperature Control for RCC Dam at Longtan Hydropower Station  
 The Dinh Binh RCC Dam in Vietnam  
 Major Technical Problems in Jin'anqiao Hydropower Project  
 Exposure Time Between Lifts at RCC Dams. A New Method Use at 'EL Esparragar' Spanish Dam  
 Design and Practice of Zhaolaihe Roller Compacted Concrete Double-curvature Thin Arch Dam  
 Temperature-Control Design and Statistics and Analysis of Monitoring Data of Longtan High RCC Dam  
 Theme 3: Materials  
 Theme 4: Numerical Analysis  
 Theme 5: Construction, Operation and Performance  
 Theme 6: Development of CSG and Other RCC Applications
