<<国家环境保护十二五规划>>

内容概要

《国家环境保护十二五规划（英文版）》内容主要包括：.En viron ment Situa
tion、.Guidelines Basic Principles and Main
Objectives、1.Guideline、2.Basic principle、3.Main objectives、
Facilitating Emission Reduction of Major Pollutants、1.More efforts
in structural adjustment、2.More efforts in reducing COD and ammonia
nitrogen discharge、3.More efforts in reducing SO₂ and NO_x
emissions、.Practically Address Preeminent Environmental
Problems。

<<国家环境保护十二五规划>>

书籍目录

- .Environment Situation
- .Guidelines Basic Principles and Main Objectives
- 1.Guideline
- 2.Basic principle
- 3.Main objectives
 - Facilitating Emission Reduction of Major Pollutants
 - 1.More efforts in structural adjustment
 - 2.More efforts in reducing COD and ammonia nitrogen discharge
 - 3.More efforts in reducing SO₂ and NO_x emissions
- .Practically Address Preeminent Environmental Problems
- 1.Improve water environment quality
- 2.Conduct comprehensive control of several kinds of air pollutants
- 3.Strengthen soil environment protection
- 4.Enhance ecological protection and supervision
- .Strengthening the Prevention and Control of Environmental Risks in Key Areas
- 1.To facilitate whole-process management of environmental risk
- 2.Strengthening nuclear and radiation safety management
- 3.Curb high incidence of heavy metals pollution accidents
- 4.Promoting safe treatment and disposal of solid waste
- 5.Improving chemical environmental risk prevention system
- .Improving Basic Public Service System for Environmental Protection
- 1.Facilitating equal basic public services for environmental protection
- 2.Improve rural environmental protection
- 3.Strengthen development of environmental supervision system
- .Carry out Key Environmental Protection Projects
- .Improve Policy Measures
- 1.Implement environment target responsibility system
- 2.Improve comprehensive decision making mechanism
- 3.Strengthen development of legal system
- 4.Improve environment economic policies
- 5.Strengthen scientific support
- 6.Develop environmental protection industry
- 7.Make more investment
- 8.Strict supervision on law enforcement
- 9.Give full play of the initiatives of local people's government
- 10.Joint efforts of relevant departments to facilitate environmental protection
- 11.Actively guide public participation
- 12.Strengthen international environment cooperation

.Strengthen Organization Leadership Assessment and Examination

章节摘录

4. Enhance ecological protection and supervision Strengthen protection and development of ecological function areas. We will strengthen the protection and management of 25 national key ecological function areas such as forests in Da Hinggan Ling and Xiao Hinggan Ling and forests in the Changbai Mountain , develop management measures and improve management mechanism. We will strengthen eco environment monitoring and development of assessment system , and carry out continuous monitoring and regular assessment of the structure and functions of ecosystems. We will conduct ecological protection and restoration projects and strictly control total discharge of pollutants in key ecological function areas and raise environmental access for enterprises.

Improve development of and supervision on nature reserves. We will carry out baseline investigation and assessment of nature reserves and comprehensively improve national plan for development of nature reserves. We will strengthen the development and management of nature reserves , strictly control the scope of nature reserves and adjustment of zoning of function areas , strictly limit development and construction activities in relation to nature reserves , and standardize the management of land and marine areas within nature reserves. We will enhance standardized development of national nature reserves. We will optimize spatial distribution and layout of nature reserves and focus on the efforts in the development of nature reserves on water ecological systems in regions such as mountain and canyon areas in southwestern part of China , hilly areas of western part of Central South China and coastal marine areas. We will rescue and protect the remaining natural habitats in densely populated areas of central and eastern parts of China. It is planned that by the end of 2015 , the total area of land nature reserves will remain steadily at 15% of total national land area.
