<<生态扶贫战略研究>>

内容概要

Ecosystems provide a huge variety of goods and services that are important to us all , but 60% of the world's ecosystem services are being degraded or used unsustainably (Millennium Ecosystem Assessment , 2005) 。

This deterioration is affecting growth and development and will continue to do so into the future。

Some of the poorest and most vulnerable groups in society , especially those living in rural areas , are the most directly dependent on ecosystem services and therefore are the most vulnerable to sudden changes in ecosystem service provision and to poor ecosystem management。

This dependence is particularly exposed when there are natural and human disasters such as drought , famine and floods。

Poor people are also less able to access or purchase substitutes to ecosystem services that they directly rely on。

<<生态扶贫战略研究>>

书籍目录

Introduction
Chapter 1 Status of Poverty and Ecosystems in China
Chapter 2 Decision-making and Drivers of Change for Ecosystems and Poverty in China
Chapter 3 Ningxia Case Study
