<<雨水积蓄>>

内容概要

This book is based on the lecturing materials for this course. It contains experience on rainwater harvesting and utilization from the mainland China and Taiwan as well as from the international community. Hereby, we would like to heartedly thank all the authors for their great support to the course and contribution to the book. We are particularly indebted to Prof. Andrew Lo, the intermediate past President of IRCSA, for his effort and time in reviewing most parts of the book.

<<雨水积蓄>>
