章节摘录

The Industrial Revolution may be defined as the application of power-driven machinery to manufacturing. It had its beginning in remote times , and is still continuing in some places. In the eighteenth century all of western Europe began to industrialize rapidly , but in England the process was most highly accelerated. England's head start ( 间上领先 ) may be attributed to the emergence of a number of simultaneous ( 同时存在的 ) factors.

Britain had burned up her magnificent oak ( 橡树 ) forests in its fireplaces , but large deposits of coal were still available for industrial fuel. There was an abundant labor supply to mine coal and iron , and to man the factories. From the old commercial empire there remained a fleet , and England still possessed colonies to furnish raw materials and act as captive ( 受垄断的 ) markets for manufactured goods. Tobacco merchants of Glasgow and tea merchants of London and Bristol had capital to invest and the technical know-how derived from the Scientific Revolution of the seventeenth century. Last , but not least important , the insularity ( 岛国性质 ) of England saved industrial development from being interrupted by war. Soon all western Europe was more or less industrialized , and the coming of electricity and cheap steel after 1850 further speeded the process. ....
