前言

Dear Student , Thank you for choosing to study for the IELTS with New Oriental. This book is the long anticipated result of a close cooperation between New Oriental and international IELTS experts to develop our own IELTS training materials. We believe it offers a different approach , with the following features : First of all , the language used is likely what you will encounter in a real classroom or work setting while living abroad. The setting of each dialogue is also consistent with how you might encounter English as used by native speakers in their own country. Also , under the guidance of renowned professor Rod Ellis , our partner international research team has delivered a proven methodology for ensuring the intended acquisition of needed skills for IELTS test takers in speaking , listening , reading and writing. And most importantly , this book incorporates ten years of IELTS training experience by the very best teachers at New Oriental , and therefore has been customized to suit the needs of Chinese students. I sincerely hope that together with these materials New Oriental teachers can make your IELTS classroom fruitful and rewarding. Enjoy your learning time with New Oriental !

内容概要

This set of course consists of four separate books, each providing specialized study activities for the four different areas of the IELTS test. You can focus on the areas where- you need the most to help your preparation. Each book features: Up-to-date and accurate information about IELTS test requirements. Strategies for test success.

Thorough and extensive coverage of topics which are commonly encountered in the IELTS test. Exercises and activities which have been based on a close analysis of the language requirements of the IELTS test.

Extensive vocabulary exercises, closely related to the language you will need to read, listen to, speak or write in the test. Well planned and designed materials to help you to understand common language for the listening and reading tests. Carefully guided and graded activities to help you to produce the English you will need in the writing and speaking.

章节摘录

Unit 11 Transpoli Model Answers : Model 1 In the past twenty years , the amount of traffic on the roads has greatly increased , and this has led to many problems with traffic jams and pollution in inner city areas. Some countries have limited the use of cars in the inner city by charging fees or restricting the days on which people can drive into the city. This approach has some disadvantages, but on the whole it is a good solution to the problems of inner city traffic. Restricting car traffic in the city can make it very difficult for some people to do their daily work. For example , moving quickly to meetings is very important for businessmen, and if they have no car, this will create problems for them. In addition, it is important for disabled people or for families with young children to access city services and they should be able to drive their cars to the places where they need to go. Limiting the use of cars could create real inconvenience for some citizens. However, there are many advantages to this idea. Firstly , it greatly reduces inner city pollution, both by reducing the number of cars and by encouraging the use of public transport. This reduction in pollution benefits everyone who lives and works in the city. Secondly , it decreases traffic congestion and makes it easier to move around the city. Thus , businessmen find it quicker to get to their meetings and to visit other locations either by taxi or by bus or rail transport. (249 words)

Font= introduce the topic Model 2 Recently , there has been a huge increase in the number of cars on the roads. This has caused many problems with traffic congestion in inner city areas. Some cities have tried to solve this problem by building motorways underground or above street level. This approach has some advantages but , in general , it is not the best solution to the problems of inner city traffic. Elevated or underground motorway networks can reduce congestion by removing a lot of traffic from city streets. Thus it is much easier to travel around the city and quicker to get from one place to another. In addition, these new networks do not need to follow existing streets so they can take a more direct route from one place to another, and this also makes it easier to travel from place to place. However , this approach has a lot of disadvantages. Firstly , it does nothing to reduce the number of cars in the city , and this means that it does not reduce pollution. In addition, it is difficult to build motorway networks in an existing city. Consequently, it takes a long time and creates a lot of congestion while the new motorways are being built. Finally, the cars that come into the city on these new networks have to come back to street level once they reach their destination. This means that there will still be a lot of cars in the city. (237 words)

Key : Bold=present perfect tense Italics=important difficult, hard easy, possible etc Model 3

Recently, the number of cars in the inner city has grown significantly , and this has led to many problems with parking in inner city areas. Some countries have tried to solve this problem by building car parks around the inner city and providing public transport to take people into the central business district. This approach has both advantages and disadvantages for commuters. Making car parks around the city can greatly reduce the number of cars in the city and make it much easier for people to travel long distances to work. They can drive their cars partway to work and then catch public transport to take them into the inner city area. This avoids waiting in long traffic jams , and also reduces or eliminates parking problems. In addition, it could be cheaper for drivers to take public transport than to pay high inner city parking fees. However , this plan needs to be carefully managed if it is going to be effective. If many people use this system it could be a good idea , but if only a few people use it, it could be costly to set up and not very effective in reducing congestion. Therefore , public transport needs to be cheap , efficient and fast, so that it is quick and economical for drivers to get into the city and to their workplaces. Secondly , there need to be sufficient car parks on the outskirts of the city so that businessmen and other commuters can easily find a park. In conclusion, making car parks around the city has some advantages for drivers , but it needs to be well planned and managed if it is to be effective. We all need to work together to reduce fossil fuel emissions and to make the inner city a more pleasant place to live and work. (302 words)
