章节摘录

You slack off for weeks , until the night before the exam. Then you still find reasons to dawdle : Got a brew a pot of coffee , and-Wait !

Your favorite mug is missing !

Finally the adrenaline starts pumping. Time to study triple time. When youre startled awake at 4a.m.with textbook crease (皱折) marks on your face , you resolve to do it differently next time. But next time rolls around , and youre in the same lame situation. Sara. From Hammonton , New Jersey , is a classic crammer : “ My study habits are terrible !

I usually start studying about 11P.m. and go until my eyes are sealed shut. Then I wake up and whip out my notebook again on the bus. ” Christina , from Cambridge , Massachusetts , says : “ Ill always wait until the last minute to study .Its like I need to get myself into panic mode to buckle (扣住) down. Other wise I stare into space with my book in my lap. But as soon as I start studying , I realize that I could have done really well , if only I had more time... ” Too late. Warning : The hours after midnight arent enough time to get all your work done or study a semesters worth of stuff. And getting ready for “ Reserve ” readings. where you and the whole class have to share one book on hold at the library. You wont have the option of doing it ALAP (as late as possible) .This years resolution : Improve your grades by adding casual study sessions before you hit high-stress mode. Bring your books outside or to your favorite cafe and skim the material. You may still get the most done when the pressures on.
