

<<预应力混凝土>>

图书基本信息

书名：<<预应力混凝土>>

13位ISBN编号：9787562438274

10位ISBN编号：7562438277

出版时间：2007-4

出版时间：重庆大学

作者：内伊

页数：513

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<预应力混凝土>>

内容概要

《缩编国外精品教材：预应力混凝土》是根据培生教育出版集团出版的教材缩编而成的英文预应力混凝土教材作者Edward G Nawy是美国新泽西州州立大学土木与环境工程系教授美国土木工程师学会和预应力混凝土领域的专家《缩编国外精品教材：预应力混凝土》作为该书最新修订的第5版，反映了2005年美国房屋标准ACI318-05和国际房屋标准IBC2003的新要求，并以其独特的视角，系统地阐明了设计和分析预应力混凝土构件的方法和步骤，详细介绍了预应力混凝土的基本理论、设计方法及其在工程中的运用。

《缩编国外精品教材：预应力混凝土》可作为结构工程及相关专业高年级本科生及研究生教材，也是从事预应力混凝土领域科研人员的实用工具。

书籍目录

1	BASIC CONCEPTS	1.1 Introduction	1.2 Historical Development of Prestressing	1.3 Basic Concepts of Prestressing	1.4 Computation of Fiber Stresses in a Prestressed Beam by The Basic Method	SELECTED REFERENCES	PROBLEMS
2	MATERIALS AND SYSTEMS FOR PRESTRESSING	2.1 Concrete	2.2 Stress-Strain Curve of Concrete	2.3 Modulus of Elasticity and Change in Compressive Strength With Time	2.4 Creep	2.5 Shrinkage	2.6 Nonprestressing Reinforcement
		2.7 Prestressing Reinforcement	2.8 ACI Maximum Permissible Stresses in Concrete and Reinforcement	2.9 AASHTO Maximum Permissible Stresses in Concrete and Reinforcement	2.10 Prestressing Systems and Anchorages	2.11 Circular Prestressing	2.12 Ten Principles
	SELECTED REFERENCES	PROBLEMS	3	PARTIAL LOSS OF PRESTRESS	3.1 Introduction	3.2 Elastic Shortening of Concrete (ES)	3.3 Steel Stress Relaxation(R)
					3.4 Creep Loss(CR)	3.5 Shrinkage Loss (SH)	3.6 Losses Due to Friction (F)
					3.7 Anchorage-Seating Losses(A)	3.8 Change of Prestress Due to Bending of a Member(Afpb)	3.9 SI Prestress Loss Expressions
	SELECTED REFERENCES	PROBLEMS	4	FLEXURAL DESIGN OF PRESTRESSED CONCRETE ELEMENTS	4.1 Introduction	4.2 Selection of Geometrical Properties of Section Components	4.3 Proper Selection of Beam Sections and Properties
					4.4 End Blocks at Support Anchorage Zones	4.5 Flexural Design of Composite Beams	4.6 Summary of Step-by-Step Trial-and-Adjustment Procedure for the Service-Load Design of Prestressed Members
					4.7 Design of Composite Post-Tensioned Prestressed Simply Supported Section	4.8 Ultimate-Strength Flexural Design	4.9 Load and Strength Factors
					4.10 ACI Load Factors and Safety Margins	4.11 Limit State in Flexure at Ultimate Load in Bonded Members: Decompression to Ultimate Load	4.12 Preliminary Ultimate-Load Design
					4.13 Summary	4.14 SI Flexural Design Expression	SELECTED REFERENCES
					PROBLEMS	5	SHEAR AND TORSIONAL STRENGTH DESIGN
					5.1 Introduction	5.2 Behavior of Homogeneous Beams in Shear	5.3 Behavior of Concrete Beams as Nonhomogeneous Sections
					5.4 Concrete Beams Without Diagonal Tension Reinforcement	5.5 Shear and Principal Stresses in Prestressed Beams	5.6 Web-Shear Reinforcement
					5.7 Horizontal Shear Strength in Composite Construction	5.8 Web Reinforcement Design Procedure for Shear	5.9 Shear Strength and Web-Shear Steel Design in a Prestressed Beam
					5.10 Brackets and Corbels	5.11 Torsional Behavior and Strength	5.12 Torsion in Reinforced and Prestressed Concrete Elements
					5.13 Design Procedure for Combined Torsion and Shear	5.14 Design of Web Reinforcement for Combined Torsion and Shear in Prestressed Beams	5.15 Strut-and-Tie Model Analysis and Design of Concrete Elements.....
					6	INDETERMINATE PRESTRESSED CONCRETE STRUCTURES	7
					CAMBER, DEFLECTION, AND CRACK CONTROL	8	PRESTRESSED COMPRESSION AND TENSION MIEMBERS
					9	TWO-WAY PRESTRESSED CONCRETE FLOOR SYSTEMS	10
					CONNECTIONS FOR PRESTRESSED CONCRETE ELEMENTS	APPENDIX A	UNIT CONVERSIONS
					APPENDIX B	SYMBOL	APPENDIX C
					ABBREVIATION
