

<<基本电子结构ELEMENTARY E>>

图书基本信息

书名：<<基本电子结构ELEMENTARY ELECTRONIC STRUCTURE>>

13位ISBN编号：9789810238957

10位ISBN编号：9810238959

出版时间：1999-12

出版时间：东南大学出版社

作者：Harrison, Walter A.

页数：817

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<基本电子结构ELEMENTARY E>>

内容概要

This is a revised edition of the 1999 text on the electronic structure and properties of solids, similar in spirit to the well-known 1980 text *Electronic Structure and the Properties of Solids*. The revisions include an added chapter on glasses, and rewritten sections on spin – orbit coupling, magnetic alloys, and actinides. The text covers covalent semiconductors, ionic insulators, simple metals, and transition-metal and f-shell-metal systems. It focuses on the most important aspects of each system, making what approximations are necessary in order to proceed analytically and obtain formulae for the properties. Such back-of-the-envelope formulae, which display the dependence of any property on the parameters of the system, are characteristic of Harrison 's approach to electronic structure, as is his simple presentation and his provision of all the needed parameters. In spite of the diversity of systems and materials, the approach is systematic and coherent, combining the tight-binding (or atomic) picture with the pseudopotential (or free-electron) picture. This provides parameters — the empty-core radii as well as the covalent energies — and conceptual bases for estimating the various properties of all these systems. Extensive tables of parameters and properties are included. The book has been written as a text, with problems at the end of each chapter, and others can readily be generated by asking for estimates of different properties, or different materials, than those treated in the text. In fact, the ease of generating interesting problems reflects the extraordinary utility and simplicity of the methods introduced. Developments since the 1980 publication have made the theory simpler and much more accurate, besides allowing much wider application. --This text refers to the Hardcover edition.

书籍目录

1 The Basic Approach 2 Bonding in Tetrahedral Semiconductors 3 Elastic Properties of Semiconductors 4 The Dielectric Properties of Semiconductors 5 Semiconductor Energy Bands 6 Electronic Properties 7 Effects of Lattice Distortions 8 Impurities and Defects 9 Bonding In Ionic Crystals 10 Elastic Properties of Ionic Crystals 11 Dielectric Properties of Ionic Solids 12 Covalent Insulators, SiO<sub>2</sub> 13 Simple Metals, Electronic Structure 14 Simple Metals, Bonding Properties 15 Transition Metals 16 f-Shell Metals 17 Transition-Metal(AB)Compounds 18 Other Transition and f-Shell Compounds 19 Surfaces and Interfaces 20 Other Systems Author Index Subject Index
